ABHIJIT CHAUDHARI

Senior Java Backend Engineer | Microservices | Spring Boot | AWS
Pune, India | +91 7770034469 | abhijituchaudhari1994@gmail.com | linkedin.com/in/abhijit-chaudhari-2894a2219

PROFESSIONAL SUMMARY

Senior Java Backend Engineer with 8+ years of experience designing and delivering high-scale distributed systems and microservices in agile environments. AWS Certified Developer with a proven track record of improving system performance by 30-45% and reducing operational costs through architectural optimizations. Expert in Java/Spring Boot with strong expertise in RESTful APIs, cloud-native applications (AWS), and fault-tolerant architectures, with working knowledge of React.js for front-end integration. Passionate about building low-latency, high-availability systems handling millions of transactions.

TECHNICAL SKILLS

Core Languages	Java (8/11/17), J2EE, SQL, JSON, XML
Backend Frameworks	Spring Boot, Spring MVC, Spring Security, Spring Cloud, Hibernate, JPA, JAX-RS
Frontend (Working Knowledge)	React.js
Microservices & APIs	RESTful Web Services, API Gateway (Kong/AWS), Swagger/OpenAPI
AI-Assisted Development & Developer Productivity	GitHub Copilot, Devin — AI-assisted coding, code generation, refactoring, debugging, unit-test generation, code review, API development, and technical documentation.
Cloud & DevOps	AWS (Certified): EC2, S3, IAM, Lambda, API Gateway, CloudWatch, RDS; Docker, Kubernetes (Basics); Jenkins, Maven, Gradle, GitHub Actions
Databases & Messaging	Oracle, MySQL, PostgreSQL, Redis (Caching), Kafka (Basic).
Testing & Quality	JUnit 5, TestNG, Mockito, Integration Testing, Performance Testing (JMeter), TDD
Tools & Monitoring	Git/GitHub, IntelliJ, Eclipse, Postman, Splunk, AppDynamics, Figma, JIRA, Confluence
Architecture & Design	Microservices Patterns (Circuit Breaker, Saga, CQRS), Distributed Systems, Domain-Driven Design, Event-Driven Architecture.

CERTIFICATIONS

- AWS Certified Developer – Associate, Amazon Web Services (Completed)

EDUCATION

- Bachelor of Engineering, Savitribai Phule Pune University

PROFESSIONAL EXPERIENCE

Cognizant | Senior Software Engineer **Jul 2022 – Present | Pune, India**

Project: Provider Portal (US Healthcare) – Enterprise healthcare platform processing 2M+ daily transactions for 50K+ healthcare providers

- Developed and deployed 15+ cloud-native microservices using Java 17 and Spring Boot on OpenShift hosted on AWS, supporting provider eligibility and claims processing with a focus on scalability, reliability, and high availability.

- Contributed to a few React.js components on the provider portal front-end, integrating them with backend REST APIs while primarily focused on backend service development
- Reduced API latency by 42% (from 850ms to 490ms) through database query optimization, Redis caching implementation, and asynchronous processing patterns using CompletableFuture
- Designed and implemented AWS API Gateway layer handling authentication, rate limiting, and routing for 25+ backend services, reducing security vulnerabilities by 60% and standardizing access patterns
- Engineered fault-tolerant system with Resilience4j circuit breaker patterns and retry mechanisms, reducing service failures by 65% during downstream system outages
- Improved system observability by implementing centralized logging (Splunk) and custom dashboards (AppDynamics/CloudWatch), reducing mean time to detection (MTTD) by 55%
- Collaborated with product managers and QA in Agile ceremonies, delivering 95% of committed features across 8 consecutive sprints
- Leveraged AI-assisted development tools such as GitHub Copilot and Devin to accelerate Java/Spring Boot development, including code generation, refactoring, unit-test creation, debugging, API implementation, and technical documentation across microservices.

Capgemini | Senior Software Developer **Oct 2018 – Jul 2022 | Pune, India**

Project: Commercial Banking Digital Platform (UK) – Enterprise banking system serving 500K+ business customers with 500K+ daily transactions

- Designed and developed 12+ RESTful microservices using Spring Boot, Spring Cloud, and JPA/Hibernate, enabling real-time account access, fund transfers, and transaction history for commercial banking customers
- Engineered high-throughput transaction processing system handling 500K+ daily transactions with subsecond latency (p95 < 300ms), implementing idempotency keys and distributed locking to prevent duplicate processing
- Implemented robust security layer using Spring Security ,LDAP with JWT
- Reduced database response time by 35% through index optimization, query refactoring, and Hibernate batch processing – improved complex reporting queries from 5 seconds to under 1 second
- Built fault-tolerant integration layer with retry mechanisms, dead letter queues, and comprehensive exception handling, achieving 99.9% successful transaction rate for critical payment flows
- Implemented CI/CD pipeline using Jenkins, Maven, and Docker, reducing deployment time by 70% and enabling zero-downtime deployments with blue-green strategy
- Created technical documentation including HLD, LLD, sequence diagrams, and API specifications (Swagger) – adopted as team standards for 3 subsequent projects

Project: HBFR Integration Framework – Legacy-to-modern migration system connecting 50+ enterprise services

- Designed dynamic routing framework that intelligently routed requests between legacy HUB systems and modern SAB platforms based on configurable business rules, supporting seamless migration of 50+ services over 18 months
- Developed integration APIs handling 1M+ daily data transfers between legacy and modern systems, ensuring data consistency through distributed transaction management and eventual consistency patterns
- Implemented circuit breaker pattern (Resilience4j) and bulkhead isolation to prevent cascading failures, improving system resilience during peak loads by 80%
- Optimized complex SQL queries and stored procedures, reducing data retrieval time by 40% for high-volume reporting services processing 2M+ records daily
- Documented 30+ REST APIs using Swagger/OpenAPI with comprehensive examples – adopted as standard for all future integration projects
