AANSHI MEHTA

mehtaaanshi@gmail.com +91 8112259847 Pune, India linkedin.com/in/aanshi-mehta

PROFESSIONAL SUMMARY

- **Senior Backend Engineer** with 5+ years of experience designing and building event-driven microservices in cloud-native AWS environments across Advertising and Banking domains.
- Strong expertise in Java (8/11/17), Spring Boot, and RESTful API design, developing scalable distributed systems processing millions of daily requests.
- Hands-on experience implementing fine-grained authorization using OpenFGA and orchestrating asynchronous workflows with Temporal to enhance reliability, scalability, and maintainability.
- Experienced in building high-traffic platforms leveraging Kafka, SNS/SQS, Kubernetes, and zero-downtime CI/CD deployments.
- Proven track record of owning microservices end-to-end — including design, deployment, observability, and production incident resolution — while delivering secure, well-tested solutions in collaboration with cross-functional teams.

CORE COMPETENCIES

- **Languages:** Java 8/11/17, Python, TypeScript, JavaScript
- **Frameworks:** Spring Boot, Spring Cloud, Spring Security (JWT, OAuth2), Hibernate, JPA, JOOQ
- **Microservices:** REST APIs, GraphQL, gRPC, API Gateway, Service Discovery
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, Cloudwatch), Docker, Kubernetes, Jenkins, GitHub Actions
- **Data:** Oracle, MySQL
- **Architecture:** Distributed Systems, Event-Driven Architecture, API Security, Domain-Driven Design
- **Tools:** Git, Maven, Gradle, SonarQube, JUnit, Mockito, Temporal.io, OpenFGA
- **Monitoring:** Grafana, Prometheus, New Relic, Splunk

PROFESSIONAL EXPERIENCE

TripleLift — Pune, India

Senior Software Engineer — **August 2023 – Present** *Advertising Platform*

- Designed, built, deployed and scaled multiple event-driven microservices using Java and Spring Boot in a distributed architecture serving high-traffic revenue-generating platforms including Deals, Segments, Margins, and Buyers, supporting zero-downtime realeses.
- Designed and developed a new microservice from scratch that implements Auth0-based authentication and **OpenFGA-based authorization**, introducing a company-wide authorization framework which reduced authorization latency by 30%.
- Built a reusable OpenFGA authorization library integrated across 6+ microservices, enabling consistent and scalable access control patterns while significantly reducing duplicate implementation effort.
- Introduce Temporal to orchestrate complex workflows, improving reliability, debuggability (via Temporal UI), and reducing long-term maintenance cost.
- Implemented comprehensive JUnit-based unit, BDD and integration testing with CI enforcement.
- Worked closely with product and frontend teams to deliver features with high availability and production stability in a fast-paced environment.

Technologies: Java 8/11/17/21, Spring Boot, GraphQL, OpenFGA, Temporal.io, AWS (EKS, RDS, S3), Redis, Apache Kafka, Docker, Kubernetes, GitHub Actions

Tata Consultancy Services (HSBC Client) — Pune, India

Systems Engineer — **November 2020 – July 2023** *Banking & Servicing*

- Worked as a Full Stack Developer in banking project that handled the online website of HSBC across 30+ Countries.
- Developed and maintained features such as payments, transfers, future-dated payments, eStatements, and secure messaging.
- Key contributor to an end-to-end Future Payments application, used across multiple markets.
- Developed secure RESTful APIs for payments and transfers across 30+ countries, ensuring compliance with banking security and regulatory standards.
- Ensured high code quality using SonarQube, CI/CD via Jenkins, and production deployments on cloud infrastructure.

Technologies: Java 8/11, Spring Boot, Angular, Oracle, Apache Kafka, Docker, Kubernetes, Jenkins, AWS (EC2, S3)

KEY TECHNICAL ACHIEVEMENTS

OpenFGA Authorization Framework

- Designed reusable authorization library reducing implementation time by 80% across 6+ services
- Implemented fine-grained access control supporting 50+ permission types with sub-5ms latency
- Documented architecture and patterns adopted as company-wide standard for authorization

EDUCATION

B.Tech in Computer Science & Engineering **2016 – 2020**

Swami Keshvanand Institute of Technology, Jaipur Percentage: 80%

AWARDS & RECOGNITION

- **Star of the Month** – TripleLift (2024) for OpenFGA-based authorization framework and Temporal workflows implementation
- **Pat on the Back Award** – HSBC (2022) for zero-defect delivery of critical payment features across 5 countries
- **Spot Award** – TCS (2021) for exceptional performance in payment system migration
