Akash Jaiswal

Software Engineer

+91-8840035091 | a.jaiswal116267@gmail.com | Pune, INDIA | Experience: 5 Years

AWS Certified Java Full Stack Developer with over 4.5 years of experience building high-performance, scalable enterprise applications in the Banking and Financial Services domain. Expertise in designing cloud-native backends using Java, Spring Boot and Microservices, and deploying applications on AWS, OpenShift and Kubernetes. Strong experience in implementing CI/CD with Jenkins, building comprehensive testing suites with JUnit and Mockito (maintaining over 90% code coverage), and monitoring production systems using Datadog and Instana. Proven track record of driving legacy-to-cloud migrations, improving system efficiency by 20% and earning multiple internal awards for technical excellence and reliability.

SKILLS

- Java Fullstack
- REST APIs
- Kafka
- Mockito
- Kubernetes
- Instana
- Spring Boot
- React.js
- AWS
- Jenkins CI
- Oracle
- Datadog
- Microservices
- JUnit
- OpenShift
- Datadog
- MySQL
- Elastic Kibana

CERTIFICATION

- Crash course on python
- Simple recurrent neural network with keras
- AWS Certified Cloud Practitioner

WORK EXPERIENCE

Software Engineer - Cognizant Technology Solutions **Apr 2022 - Present**

- Engineered high-performance backend banking applications using Java, Spring Boot, and Microservices to handle critical financial transactions for Discover Bank.
- Spearheaded a legacy-to-cloud migration from SOAP to REST with deployments on AWS, OpenShift Container Platform and Kubernetes, and automated delivery using Jenkins CI/CD pipelines.
- Streamlined inter-service communication to improve system efficiency and reduced response times by 20%.
- Formulated unit and integration test suites using JUnit, Mockito and Wiremock, achieving and maintaining over 90% code coverage.
- Established application performance monitoring and alerting using Datadog and Instana, significantly reducing production downtime.
- Participated in Agile/Scrum ceremonies to translate business requirements into scalable technical components.
- Recognized with Cognizant Blue Bolt Award and multiple Cheers Awards for technical execution, production stability contributions and leadership.

Programmer Analyst - Cognizant Technology Solutions **Sep 2021 - Mar 2022**

- Led development of real-time applications using Java, Spring MVC, React.js and Bootstrap for the FSE Accreditation project.
- Delivered an automated full-stack training tracking solution with a responsive React UI and secure backend integration.
- Designed and optimized complex SQL schemas, views and data retrieval processes using Oracle and MySQL.

PROJECTS

Discover Bank Project

- Spearheaded the modernization of legacy SOAP web services to Spring Boot RESTful APIs for Discover Financial Services, enhancing service performance and compliance.
- Transformed complex WSDL data structures into standard-compliant REST resources to simplify integration.
- Developed request/response mapping layers to ensure uninterrupted banking operations during migration.
- Built dynamic frontend interfaces using React.js and Redux, implementing reusable components for efficient state management.
- Integrated RESTful APIs with React.js to enable seamless frontend-backend communication and real-time data updates.
- Implemented Apache Kafka for asynchronous event-driven communication between microservices, enabling reliable and scalable processing of application events.

- Established automated Jenkins pipelines for the new REST microservices, transitioning the project to CI/CD.
- Achieved a 20% reduction in overall system response times through optimized service design.

Hospital Management System **3 Months**

- Developed and implemented a scalable Hospital Management System to automate healthcare workflows and improve patient care.
- Engineered server-side components using Java 17 and Spring Boot to build robust backend services.
- Implemented Spring Security with JWT for secure authentication and authorization.
- Designed microservices architecture for modularity and easier maintenance.
- Used Hibernate/JPA with MySQL for efficient data persistence.
- Built dynamic front-end interfaces with React.js and Redux and exposed RESTful APIs for front-end/back-end communication.

Picsriber (image caption Generator) **5 Months**

- Developed a deep learning based image captioning system combining Convolutional Neural Networks and Recurrent Neural Networks to generate captions from images.
- Worked on data processing and model training as part of a four-member team.

EDUCATION

2021 **B.Tech/B.E. - Bachelor of Technology / Engineering | Computer Science and Engineering (CSE)**
Pranveer Singh Institute of Technology, Kanpur
Marks - 70%

2016 **12th**
CBSE, English
Marks - 65%

2014 **10th**
CBSE, Hindi
Marks - 77%

EXTRA-CURRICULAR ACTIVITIES

Technical Projects

Developed academic and personal projects including a Hospital Management System, image caption generator using deep learning, and a Sudoku solver demonstrating strong algorithmic and full-stack implementation skills.

ACHIEVEMENTS & RECOGNITIONS

Achievements

Received Cognizant Blue Bolt Award and multiple Cheers Awards for technical execution, production stability contributions and peer-to-peer leadership. Successfully completed FSE Accreditation Program in 2022. Recognized by client for contributions to contract testing and Datadog monitoring.
