OBJECTIVE/SUMMARY

Results-driven and visionary technology leader with over 8 years of experience in designing, developing, and managing scalable enterprise applications. Adept at leading high performing teams and driving digital transformation through innovative solutions. Expertise in Core Java, Spring Framework, Microservices, AWS, and Agile methodologies. A proven track record in spearheading complex projects, optimizing performance, and delivering business-critical applications in dynamic environments. Seeking a Lead position to leverage leadership, technical acumen, and strategic insight to drive organizational growth.

SKILLS

Technical Expertise:

- **Programming Languages: Java**, TypeScript, **SQL**, HTML5, CSS3, **JavaScript**, Python
- **Frameworks & Libraries:** Spring, **Spring Boot**, Hibernate / JPA, Kafka, **Angular**, Spark, Big Data, React.js, Redux, Node.js, Vue.js, Bootstrap, Java SDK / J2SE, JSF, Java EE.
- **Databases/Storage:** MySQL, PostgreSQL, MongoDB, Sybase/DB2, Oracle/SQL Server, Elasticsearch, NoSQL, Aurora DB, Relational Database.
- **Cloud & DevOps:** AWS, Azure, Terraform, Cloud / Kubernetes, Docker, Jenkins, GAP, Ansible, Load Balancer, Deployment Workflows/Pipelines CI/CD, Jules.
- **Software Development:** Microservices, RESTful APIs, SOAP, Test-Driven Development, Agile methodologies, CI/CD, Multithreading.
- **Optimization:** Performance tuning, algorithm efficiency, caching strategies, database query optimization.
- **Tools:** Git, Maven, Gradle, Jenkins, Jira.
- **AI :** Generative AI, Conversational AI, Agentic AI, GPT-4.1, OpenAI API Integration, AI-powered Data Reconciliation, Autonomous AI Agents

Leadership & Management:

- Project and team leadership in Agile environments.

- Cross-functional collaboration with product managers, UX designers, and stakeholders.
- Mentoring junior and mid-level engineers to drive technical excellence.
- Strategic planning and execution for business-critical applications.

PROFESSIONAL EXPERIENCE

Senior Software Developer | Operational Risk Platform

July 2021 - Present
Technologies: Java 17, **Spring Boot**, **React**, Python, Spark, Big Data, **Open AI**, AWS (ECS, Lambda, S3), SQL

- Worked as a **Senior Developer** in designing and implementing a cloud-based reporting tool that optimized financial data processing and analysis.
- Architected microservices for high availability and scalability using **Spring Boot**, **AWS EKS**, and on-prem cloud (**GKP/GAP**).
- Implemented secure RESTful APIs with **JWT-based authentication**, **IDA integration**, and **ADFS-based single sign-on (SSO)** for enterprise-grade access control.
- Applied **Resilience4j** for circuit breaking and retry mechanisms, and integrated distributed tracing with **Spring Cloud Sleuth** and **ELK stack**.
- Optimized backend performance with **connection pooling**, **multi-threaded processing**, and **SQL query tuning**.
- Enhanced data reporting by integrating **GPT-4.1 API** for automated data reconciliation and anomaly detection.
- Integrated **Open AI API** (Swagger) for API documentation, versioning, and developer onboarding.
- Directed front-end development using **React.js** with **Redux** for state management and **React Router** for navigation.
- Built dynamic UI components with reusable hooks, form validation, conditional rendering, and pagination.
- Enhanced user experience through **lazy loading**, **debounced search**, and optimized Axios-based API integration.
- Established Agile best practices including sprint planning, retrospectives, and stand-ups.

- Spearheaded performance optimizations that reduced report generation time by **40%**.

Software Developer | TBML (Trade-Based Money Laundering)
Dec 2019 – July 2021

Technologies: Java, Spring Boot, AWS, Tesseract OCR, PostgreSQL

- Developed a microservice-based backend using **Spring Boot** to identify suspicious **inter-state trade transactions** as part of anti-money laundering compliance.
- Integrated **OCR (Tesseract)** for automated extraction and validation of trade documents including invoices and shipping papers.
- Designed data pipelines to cross-verify trade values, routes, and document authenticity.
- Collaborated with compliance teams to implement rule-based checks for high-risk patterns in cross-border trade.
- Implemented robust error handling and retry mechanisms in API communications to maintain data consistency and fault tolerance.
- Ensured secure handling of sensitive financial documents and compliance with regulatory standards.

Software Engineer | Material Requestion

Dec 2018 - Nov 2019
Technologies: Java 8, **Spring Boot**, Python Scripts, ReactJS, AWS, Sybase/DB2

- Developed and integrated RESTful APIs for inventory and procurement management, improving operational efficiency and reducing manual errors by 30%.
- Drove architectural decisions, ensuring system resilience and scalability.
- Managed API integrations with material suppliers for real-time inventory updates.

- Created and optimized complex SQL queries and stored procedures in Sybase/DB2 for real-time data synchronization with supplier systems.
- Directed unit testing and peer reviews, improving code quality and maintainability.
- Implemented robust error handling and retry mechanisms in API communications to maintain data consistency and fault tolerance.
- Provided mentorship to junior developers, fostering a culture of technical excellence.

Software Engineer | CARPRO Product Development

Jan 2017 - Dec 2018
Technologies: Java, Spring, Hibernate, **Angular 8**, Azure, PostgreSQL

- Worked on backend development for CARPRO management applications, improving booking and scheduling efficiency.
- Designed and implemented RESTful APIs, optimizing system interactions.
- Worked closely with UX designers to deliver seamless user experiences.
- Managed production deployments and post-release support.

ADDITIONAL INFORMATION

- Available for hybrid/remote and work from office base roles.
- Strong background in banking, Payments, FRM, CRM, and ERP solutions.
