SUMMARY :

Result-oriented Java Backend Developer with 4.6+ years of experience building scalable, high-performance enterprise applications. Expert in Java, Spring Boot, and Reactive Programming, with strong experience in RESTful APIs and microservices architectures for distributed systems. Proven ability to integrate third-party services and develop secure, reliable solutions for high-volume workloads. Skilled in performance optimization, clean code practices, and Agile development with exposure to CI/CD and modern engineering standards.

TECHNICAL SKILLS :

Programming Languages : **Java,** JavaScript, Python Database(DBMS): **MySQL**, **Oracle DB2, MongoDB**
Frameworks : **Spring**, **SpringBoot**, Spring WebFlux, **Microservices**, JPA

Version Control: **Git, Github,** TortoiseSVN

Development: Messaging Queues (Kafka,SQS), **Agile(Scrum), Docker, Kubernetes, Unit Testing(Junit, Mockito)**

Others: Data Structures & Algorithms,**Problem-Solving,** Communication, Critical Thinking

Generative AI: Claude AI, ChatGPT

EXPERIENCE :

Consultant – Deloitte | July 2025 – Present

(Java, Spring Boot, Spring WebFlux, MongoDB, Microservices, ELK Stack)

- Implemented scalable microservices using **Java, Spring Boot, and Spring WebFlux,** leveraging Messaging Queue's for reactive architecture; reduced latency by 70% and improved API response times via **Redis caching** and MongoDB optimization.
- Developed secure and scalable REST APIs using **Java 17 and Spring Boot** to digitize end-to-end insurance workflows.
- Led integration of 3 **Payment Gateways**, building order creation, status tracking APIs, and **webhook mechanisms** to enable seamless and real-time payment processing.
- Built **Schedulers** to recover pending transactions and ensure successful insurance purchases, reducing **failures by 90%**.
- Deployed microservices and distributed systems in production using CI/CD pipelines, Helm Charts, and containerized environments, ensuring scalability, reliability, and automated deployments. achieving **40-60% faster release cycles** and improving **system reliability by 20-30%**.

Senior Systems Engineer (Onsite) – **Infosys** | June 2022 – July 2025

- Acted as SPOC for requirement gathering, design, and development of mobile and internet banking features, driving efficient delivery and alignment with business needs.
- Delivered key features such as "**Register for IBS from Mobile**", "**Account Access Update**", "**Set Limit**", "**Invite and Refer**", "**Update KYC Status**" and a comprehensive "**Feedback**" module, driving a 25% increase in user engagement and satisfaction.
- Developed and optimized secure financial transaction modules, including NEFT, RTGS, IMPS, and ad hoc payments, ensuring seamless and reliable fund transfers.
- Integrated multiple third-party APIs (SOAP & REST) such as Aadhaar, PAN, FATCA, Form 26AS, and Form 15G/15H using DEH framework, enhancing compliance and automation of banking workflows.

Software Engineer – **Cavisson Systems** | July 2021 – June 2022

- Analyzed project requirements and implemented features with a focus on problem-solving and precision.
- Integrated REST APIs, enhancing data performance and user experience.

EDUCATION :

Bachelor of Technology in Electronic & Communication *July* **2021** Jaypee Institute of Information Technology, Noida, Uttar Pradesh, India.
