Summary

Senior Software Engineer with 4+ years of experience specializing in Java, Spring Boot, and Microservices. Experienced in leading end-to-end SDLC activities and delivering business-critical solutions in Agile environments. Skilled in building scalable systems using REST APIs, Spring Security, Spring MVC, and JPA, with hands-on experience in Docker, system design and production support.

Professional Experience

Senior Software Engineer
July 2021 - Present
Netcracker Technology
Pune, India

- Contributed to the development and maintenance of **80+ product components**, majorly working on **Java**, **Spring Boot**, **REST APIs** & **JavaScript**.
- Led the **SDLC** for a suite of features by translating business needs into technical designs, assigning tasks to team members, and overseeing the entire process from dev-testing to delivering the final build.
- Conducted a **POC** for migration of legacy components from **Ant to Maven**; then led an 8-member team to **migrate 40+ components**
- Engineered a **Production Support Component** to automate complex task actions and **secure data fixes** in go-live environments which eliminated direct database access risks and **reduced resolution time by 60%** for global clients.
- Conducted code reviews and mentored junior engineers, improving code quality and accelerating solution delivery.

Personal Projects

Real-Time Fraud Detection Engine
Link

- Architected a high-throughput event processing engine using **Spring Boot** and **Kafka Streams** to identify banking anomalies in real-time.
- Designed an event-driven stream processing topology utilizing **KStream branching**, **Session Windows**, and **Suppression logic** to detect complex fraud patterns such as cross-device activity and high-value online transactions.
- Optimized stateful processing using **RocksDB** for local state management, custom **JSON Serdes**, and dedicated **event-time extraction logic** to handle asynchronous transaction data
- Orchestrated containerized infrastructure with **Docker Compose** and validated system reliability using **Testcontainers** for automated integration testing.

E-Commerce Platform
Link

- Developed an eCommerce application using **Spring Boot**, **JPA** and **PostgreSQL**, optimized data retrieval with **pagination and sorting** via **Spring MVC** within a **Docker**-containerized architecture.
- Implemented **JWT-based authentication and authorization** with **Spring Security** to manage secure access for users, roles, and permissions.

Skills

Programming Languages: Java, JavaScript, SQL
Frameworks & Libraries: Spring Framework, Spring Boot, Spring Security, Spring MVC, Hibernate, React
Architecture & Technologies: Microservices, REST APIs, Kafka, Kafka Streams, Docker, Distributed Systems
Databases: Oracle Database, PostgreSQL
Development Tools: Git, GitLab, SVN, Maven, IntelliJ, VS Code, Cursor

Education

National Institute of Technology, *Rourkela*
June 2017 - April 2021
Bachelor in Technology, Electrical Engineering
CGPA: 7.44

Mother's Public School, *Bhubaneswar*
April 2016 - March 2017
12th Class, Secondary School
88.8%
