PROFESSIONAL EXPERIENCE AND SUMMARY

Senior Software Engineer with **7+ years of experience** in designing and developing **cloud-native, distributed Java backend applications** using **Java, Spring Boot, Microservices, REST APIs, and Apache Kafka**. Experienced in building **event-driven, scalable, and high-performance** solutions on **AWS** for the banking and financial services domain. Skilled in **AI-enabled application development** using Spring AI and OpenAI, with expertise in performance optimization, secure application development, code reviews, mentoring, and delivering robust enterprise solutions in Agile environments.

TECHNICAL SKILLS

- **Programming Languages:** Java (8/11/17), SQL, Data Structures & Algorithms
- **Frameworks & Backend:** Spring Boot, Spring Data JPA, Hibernate, Spring Security, Microservices, REST APIs, WebClient, RestTemplate, FeignClient, Apache Kafka, Resilience4j, OpenAPI/Swagger
- **Security:** OAuth 2.0, JWT
- **Testing:** JUnit 5, Mockito, Cucumber
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Cloud & DevOps:** AWS (EC2, ECS, EKS, Lambda, S3, RDS, IAM, SNS, SQS, CloudWatch), Docker, Kubernetes, Jenkins, PCF (Pivotal Cloud Foundry), Grafana, CI/CD Pipelines
- **Build & Development Tools:** Maven, Git, Jira, SonarQube, Nexus Repository, JFrog Artifactory, Checkmarx, Veracode, Splunk, AppDynamics
- **AI & LLM:** Spring AI, OpenAI API Integration, Prompt Engineering, Retrieval-Augmented Generation (RAG), Vector Databases
- **Methodologies:** Agile/Scrum, Waterfall

EMPLOYMENT HISTORY

Senior Technical Engineer | Coforge, Pune, August 2026- Till Date

Senior Software Engineer | LTIMindtree, Pune, May 2022- July 2026

BFSLAB (MAP-MVP)- Dec 2025 – May 2026

Developed a Generative AI-powered banking application for account opening and grant fund processing by extracting data from PDF/Excel forms, validating customer information, and automating analyst approval workflows.

- Developed Spring Boot microservices including **Orchestration, Agent Wrapper and Services** for account opening and grant processing.
- Built REST APIs to collect, validate, and process customer data from internal and external systems.
- Integrated **Apache Kafka** for reliable event-driven communication across microservices.
- Implemented data validation, correction, and analyst approval/rejection workflows.
- Improved code quality with unit and integration testing using **JUnit 5** and **Mockito.**
- Containerized microservices using **Docker**, enabling consistent deployments and streamlined CI/CD.
- Leveraged **Kubernetes for container orchestration**, enabling dynamic scaling, rolling updates, and zero-downtime deployments.
- Conducted code reviews and collaborated with business, QA, and support teams to deliver secure, scalable banking solutions.

BFSLAB (Wealth Companion)- Dec 2024 – Oct 2025

Wealth Companion is a Generative AI-based application that helps financial advisors analyze client portfolios, interpret market news, and provide investment recommendations based on market trends. Enhanced system stability by resolving bugs, ensuring seamless delivery.

- Resolved issues and bugs, improving application stability and ensuring smooth feature delivery.
- Participated in code reviews to maintain code quality and development standards.
- Built and deployed Docker images for Spring Boot microservices, simplifying deployments and supporting CI/CD.
- Integrated Apache Kafka with Spring Boot microservices to enable asynchronous communication and improve scalability.
- Implemented OAuth 2.0-based authentication using Spring Security to secure application access.
- Collaborated with team members through regular peer code reviews and knowledge sharing.

BFSLAB (LOS and RECON)- Apr 2024 – Dec 2024

The **Loan Origination System (LOS)** streamlines the complete loan lifecycle, from application submission to loan disbursement, with Generative AI used to improve processing efficiency and flexibility. The **RECON** application automates financial data reconciliation across multiple data sources, helping identify discrepancies, generate reports, and support audit processes.

- **Implemented JPA for ORM**, optimized SQL queries, and managed **MySQL** database.
- **Implemented JWT** for secure authentication across platforms.

Client: BNY Mellon | Jul 2022 – Mar 2024

EZO Integration Project – Automated CSV Data Comparison Workflow

Developed an automated CSV validation solution using two scheduled jobs. The first scheduler extracted database records into an EZO CSV file and stored it on a shared drive. The second scheduler monitored for both EZO and GRX CSV files, sent email notifications if the GRX file was unavailable, compared the files once received, logged discrepancies to the database, and archived the processed files for future reference.

Responsibilities & Achievements

- Developed and maintained the EZO application to automate CSV validation and comparison workflows.
- Mentored junior developers through code reviews and technical guidance, improving code quality and maintainability.
- Implemented JPA/Hibernate for data persistence, optimized SQL queries, and managed the MySQL database.
- Worked closely with cross-functional teams to deliver features that improved operational efficiency and streamlined development.

Associate Consultant | Capgemini, Pune, 10/2019 - 04/2022

Client -HSBC

- Developed and maintained **Java Spring Boot microservices** and **RESTful APIs** for digital banking applications, supporting account management, credit card operations, transaction services, and customer profile management.
- Implemented backend services for **credit card instalments, card activation, blocking/replacement, account inquiry, transaction history, and MI logging**, following microservices architecture and secure coding practices.
- Wrote unit tests using **JUnit and Mockito** and improved code quality with SonarQube, contributing to a 70% reduction in post-deployment defects.
- Collaborated with cross-functional Agile teams to deliver scalable, high-quality features within project timelines.

Java Developer | IDC Technologies, Ahmedabad, Dec 2018 – Apr 2019

Client - Sterlite Technologies
Worked on the **Policy and Charging Control (PCC)** application, which enables real-time policy management based on subscriber profiles, account plans, and network conditions to improve network performance and customer experience.

- Designed and developed Spring Boot microservices, ensuring scalability, performance, and maintainability.
- Re-engineered existing microservices to improve system efficiency and application performance.
- Increased code coverage to 70%, improving code quality and maintainability.
- Refactored legacy codebase to Java 8, improving performance and aligning the application with modern development standards.

AWARDS & CERTIFICATIONS

- Super Crew Award, LTIMindtree, March 2026
- Spring & Hibernate, Udemy, Issued May 2021

ACADEMIC QUALIFICATION

- Bachelor of Engineering in Electronics & Communication, R.G.P.V University, Bhopal, 2008 - 2012
