PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience in backend development using Java 8/11/17 and frontend development with React.js and TypeScript. Experienced in Spring Boot, Spring MVC, Spring Data JPA, Hibernate, and Microservices architecture. Skilled in designing RESTful APIs, working with SOAP services, implementing event-driven systems using Apache Kafka, optimizing SQL and PL/SQL queries, and deploying applications on Microsoft Azure. Strong understanding of Object-Oriented Programming, multithreading, CI/CD pipelines, Docker, Jenkins, Agile Scrum, and end-to-end SDLC.

TECHNICAL SKILLS

Core & Back-End:	Java (8/11/17), Spring Boot, Spring MVC, Spring Security, Hibernate ORM, Microservices Architecture, RESTful APIs
Front-End:	React.js, TypeScript, Redux Toolkit, JavaScript, HTML5, CSS3, Bootstrap
Databases & Caching:	PostgreSQL, MySQL, MongoDB, Redis, Oracle DB
Cloud & DevOps:	Azure, Docker, Kubernetes, Jenkins CI/CD, Git
Messaging & Tools:	Apache Kafka, Git, Postman, Event-Driven Architecture
Methodologies:	Agile/Scrum, Test-Driven Development (TDD), JUnit, Mockito

PROFESSIONAL EXPERIENCE

ACCENTURE | April 2026 – Present

Application Development Team Lead | April 2026 – Present

Digital Banking and Loan Application

- Developing digital banking features across multiple Banking Applications, which included customer onboarding, account opening and cash-loan, New-to-Bank and SME flows using Spring Boot microservices and React/Redux.
- Designed and integrated automatic account funding for referral-based onboarding by consuming a SOAP eligibility service through the ESB at the shared account-opening layer.
- Generated SOAP client stubs from WSDL, implemented the repository layer using the shared ESB caller, and validated the integration end-to-end while resolving Spring Security issues.
- Contributed to a real-time onboarding reporting interface by adding process-step/attribute data and exposing application details through the BFF/API Gateway.
- Investigated and resolved UAT/production defects across frontend and backend, including validation, API and state-management issues.

TATA CONSULTANCY SERVICES | Jan 2021 – April 2026

Senior Software Developer | Dec 2021 – April 2026

Retail Financial Operation & Reporting Platform

- Designed, developed, and maintained 5+ Java Spring Boot microservices following REST and microservices architecture principles; built scalable RESTful APIs using Spring Boot, Spring MVC, and Spring Data JPA.
- Implemented Apache Kafka–based event-driven architecture, migrating legacy PL/SQL batch jobs and reducing processing time.
- Optimized complex SQL and PL/SQL queries, indexes, and database performance, achieving 40% faster data retrieval. Worked extensively with Oracle and PostgreSQL databases, handling high-volume transactional data.
- Implemented unit and integration testing using JUnit, Mockito & improving code quality and test coverage; deployed and monitored applications on Microsoft Azure using CI/CD pipelines and Docker containers.

Software Developer | Jan 2021 – Nov 2021

Senior Living App

- Developed Java Spring Boot backend services for a senior living management application supporting real-time data processing; designed Backend-for-Frontend (BFF) services to optimize API responses and improve frontend performance.
- Implemented JWT-based authentication and authorization using Spring Security; performed end-to-end integration testing across backend and frontend layers.

PROJECTS

GRAM- Group Role Access Management

- Built and deployed an identity access management system (GRAM) that automated user provisioning across AWS, Redshift, and internal data platforms by serverless functions and APIs.
- Improved request handling capacity by 200% and reduced operational overhead by integrating with internal identity systems and implementing secure role-based access controls for 10,000 users.

Employee Lifecycle & Access Orchestration Engine (ELAO)

- Architected and deployed an event-driven enterprise mesh that automated real-time cross-departmental user provisioning, lifecycle state synchronization, and dynamic resource allocation via reactive APIs.
- Multiplied concurrent data sync throughput by 300% and slashed cross-system data latency by integrating distributed caching infrastructure with event streaming pipelines, securely orchestrating workplace identities and granular permission sets for an enterprise landscape.

CERTIFICATIONS

- AZ-900: Microsoft Azure Fundamentals
- AZ-204: Developing Solutions for Microsoft Azure
- MuleSoft Certified Developer – Level 1
- Claude Certified Developer – Foundations (CCDV-F)

EDUCATION

B.Tech in Computer Science & Engineering, Madan Mohan Malaviya University of Technology, 2020 | CGPA: 7.6
