GAURAV PARALKAR

Pune, Maharashtra, India | gaurav.paralkar0330@gmail.com | +91 9699153001

SUMMARY

Full Stack Java Developer with 5+ years of experience in designing and developing scalable, high-performance applications using Java/J2EE, Spring Boot, Microservices, and modern front-end frameworks. Proficient in building RESTful APIs, integrating front-end and back-end systems, and managing relational databases. Skilled in Agile methodologies, CI/CD pipelines, and cloud technologies. Hands-on experience with Angular/React, JavaScript, HTML, CSS to deliver responsive and user-friendly applications.

EXPERIENCE

Senior Software Engineer — January 2026 – Present

Xorient | Client: Mastercard (Project XBS)

- Working on backend development for the Mastercard XBS project in a microservices architecture using Spring Boot and Java.
- Designed and developed RESTful APIs with Swagger/OpenAPI specification, enabling standardized, contract-first API documentation.
- Performed database migration tasks, managing schema changes and data migration scripts to ensure data integrity across environments.
- Conducted all types of testing including unit (JUnit/Mockito), integration, and API testing to maintain high code quality and coverage.
- Leveraged GitHub Copilot to accelerate development, improve code quality, and reduce boilerplate through AI-assisted coding.
- Collaborated in an Agile/Scrum environment, participating in sprint planning, code reviews, and cross-team coordination.

Senior Software Engineer — November 2025 – January 2026

Wipro

- Engineered robust cloud-based microservices by leveraging containerization technologies, ensuring high scalability and seamless integration within clients' digital transformation frameworks.
- Integrated rigorous CI/CD pipelines that automated testing and deployment processes, substantially accelerating release cycles while maintaining alignment with clients' digital transformation objectives.
- Streamlined application architecture by consolidating legacy systems onto a unified platform, bolstering maintainability and supporting clients' evolving digital initiatives.

Senior Software Engineer — February 2025 – October 2025

INVENTZO SYSTEMS PRIVATE LIMITED | Chennai, Tamil Nadu, India

- Designed, developed, and maintained both backend and frontend components of web applications using Java (Spring Boot / Spring MVC), ensuring clean code, modular architecture, and scalability.
- Built RESTful APIs for communication between frontend and backend services; handled API design, security (e.g. authentication/authorization), validation and error handling.
- Developed and maintained interactive user interfaces using JavaScript, TypeScript, HTML5, and CSS3 within Angular and React frameworks, applying component-based architecture to enhance usability and performance.
- Integrated with relational databases (MySQL / PostgreSQL / Oracle) using ORM (Hibernate / JPA), wrote complex queries, optimized DB performance (indexes, query tuning).

Senior Software Engineer — July 2024 – February 2025

Apexon | Pune, Maharashtra, India

- Handled L2/L3 production support for Java-based banking applications built using Spring Boot, Hibernate, Angular, and MySQL.
- Performed log analysis and container monitoring on Dockerized services to quickly identify and resolve application issues, minimizing user impact.
- Debugged and fixed backend defects (Java, Spring Boot) and frontend issues (Angular/React) to ensure system stability and minimal downtime.

- Leveraged industry-standard monitoring tools and log analysis to efficiently surface application anomalies and optimize production support processes.
- Analyzed and optimized slow-performing SQL queries, including applying database indexing, to improve application performance.
- Developed small enhancements and feature updates, such as new UI components and API changes, based on client and business requirements.
- Conducted regular knowledge-sharing sessions to align cross-team processes for application maintenance, contributing to smoother workflows and continuous system uptime.

Software Engineer
September 2020 – July 2024

HPC Consulting Pvt. Ltd | Delhi, Maharashtra, India

- Utilized Spring ecosystem tools including Boot and Data JPA, contributing to a 25% increase in system modularity and maintainability.
- Applied core Java principles (OOPs, collections, exception handling) to optimize backend logic, eliminating code redundancy by 15% and enhancing application stability.
- Built multithreaded modules with the Executor Framework, improving background task execution speed by 40%.
- Created and maintained API documentation with 100% endpoint coverage using Swagger, resulting in a 50% reduction in onboarding time for new developers.
- Implemented Spring Validation across 15+ input endpoints, cutting down on submission errors by 35% and enhancing data integrity.

PROJECT

Mastercard XBS

Xorient | Client: Mastercard

- Developed backend APIs using Spring Boot in a microservices architecture for the Mastercard XBS platform.
- Implemented Swagger/OpenAPI-based API documentation enabling standardized, contract-first API design and seamless consumer integration.
- Executed DB migration scripts and managed schema evolution across dev, staging, and production environments ensuring data integrity.
- Implemented comprehensive test suites including unit (JUnit/Mockito), integration, and API testing, achieving high code coverage.
- Leveraged GitHub Copilot to accelerate development, reduce boilerplate, and improve overall code quality through AI-assisted coding.

Ashtead Group

INVENTZO SYSTEMS PRIVATE LIMITED

- Developed 25+ RESTful APIs using Spring Boot and Spring Data JPA in a microservices-based architecture, Accelerated service integration by 30%.
- Integrated advanced Java features Object-Oriented Programming(collections, enums, Java 8), which improved application efficiency and reduced code complexity by 20%.
- Utilized Swagger for documenting 100% of available APIs, accelerating onboarding time for new developers by 40% and mitigating cross-team errors.
- Managed MySQL data via Repository, DAO, and DTO layers, optimizing data access patterns and improving query performance by 25%.
- Implemented unit and integration tests using Mockito, achieving 85% code coverage and reducing regression defects by 35%.

Banking Application Production Support

Apexon

- Handled L2/L3 production support for Java-based applications built on Spring Boot, Hibernate, Angular, and MySQL.
- Applied log analysis techniques in conjunction with container monitoring on Dockerized services to promptly address application errors and minimize user impact.
- Debugged and fixed defects/bugs in backend (Java, Spring) and frontend (Angular/React), ensuring minimal downtime.

- Applied monitoring solutions and logging frameworks to promptly detect recurring incidents, streamlining resolution workflows for the banking application production environment.
- Optimized slow-performing SQL queries and applied database indexing to improve performance.
- Developed small enhancement features (e.g., new UI components, API updates) based on client requests.

CVS Health Corporation
HPC Consulting Pvt.Ltd

- Architected and delivered over 40 REST APIs with intuitive Swagger UI documentation, streamlining API consumption and halved integration challenges.
- Coordinated and executed 20+ feature enhancements and bug fixes under tight deadlines, driving a 30% increase in deployment frequency and product stability.
- Directed the creation of a health data management system, enhancing patient data accuracy and meeting industry regulations.
- Applied Mockito in the health data management system to isolate service layers during testing, ensuring accurate validation of business logic and reducing QA feedback cycles by 25%.

Euronics
HPC Consulting Pvt.Ltd

- Created scalable backend logic using Spring Boot, Hibernate, and MySQL, supporting over 500,000 daily transactions with 99.9% uptime.
- Improved system performance by 30% through optimization with Java 8 features and multithreading, optimized backend to bring down request time from 200ms to 140ms.
- Implemented robust validations, mailing services, and database operations that handled over 1 million records with less than 0.01% error rate.
- Leveraged Mockito to simulate complex service dependencies during testing, enabling faster development cycles and ensuring consistent test reliability across multiple environments.

EDUCATION

BE — Savitribai Phule Pune University, Pune, Maharashtra, India

SKILLS

- Languages: Java 8, Core Java, SQL, JavaScript, TypeScript
- Backend Frameworks: Spring (Core, Boot, Data JPA, MVC), Hibernate, Microservices
- Frontend Technologies: Angular, React, HTML5, CSS3, Bootstrap, Thymeleaf
- Testing: JUnit, Mockito
- Databases: MySQL, PostgreSQL, Oracle
- Cloud & DevOps: AWS (EC2, S3), Docker, Jenkins, CI/CD
- Version Control: Git, Bitbucket, GitHub (GitHub Copilot)
- API & Docs: Swagger, OpenAPI Specification
- Project Management: Jira, Agile/Scrum
- Tools: IntelliJ IDEA, Eclipse, STS, Postman, Maven
