SUMMARY

Senior Full Stack Developer with 5+ years of experience **designing, developing, and optimizing enterprise-grade web applications**. Specialized in **Java, Spring Boot, ReactJS, and Microservices Architecture**, with strong expertise in REST API design, distributed systems, **and performance optimization**. Proven ability to **mentor developers**, drive **agile/Scrum delivery**, and cross-collaborate with **product, DevOps, and QA teams** to deliver **secure, high-quality, user-focused solutions**. Recognized for technical ownership and continuous improvement of application performance and developer productivity.

EXPERIENCE

Senior Software Engineer
06/2026 – till date

Empower Global — Remote

Contributed as a Java Full Stack Developer within an Agile team, developing a web-based authentication system through ReactJS frontend components and Java backend services.

Software Engineer II
05/2023 – 05/2026

StanCorp Global Services (Allstate Employer Voluntary Benefits Team) — Pune

(Transitioned to StanCorp through the Employer Voluntary Benefits acquisition from Allstate Insurance)

Insurance domain organization delivering diversified group health and life policy products and digital insurance solutions.

Java Full Stack Engineer (ReactJS) in the insurance domain, delivering scalable solutions for policy platforms (EIS, L70) by analyzing business requirements and implementing high-impact features

Expertise in Spring Boot, Microservices, REST APIs, and ReactJS, driving end-to-end development (frontend, backend, integrations) while improving system performance, user experience, and business outcomes

Mentored junior developers and associates on full-stack technologies, enabling them to build end-to-end capabilities and independently deliver across frontend, backend, and integration layers.

Senior Software Engineer
04/2021 - 04/2023

Capgemini — Pune

Consulting company providing IT services

Worked with a US-based financial services client on an Anti–Money Laundering System as a Java Full Stack Developer, utilizing ReactJS and microservices architecture under Agile methodologies. Monitored and supported project development using DevOps tools including Jenkins, GitHub, and SonarQube.

PROJECTS

Prompts Decryption System

Tool decrypt production logs

- Developed an end-to-end application using Spring Boot, Spring Cloud reverse proxy, REST APIs, React TypeScript, and Material UI.
- Built tools to decrypt and analyze production logs, improving debugging efficiency and operational monitoring.

Employer Management System

Customers facing website to make Employer billing for their employees under group insurance

- Reduced API response time by 90% by implementing optimized event-driven handlers and asynchronous processing.
- Improved system performance by reducing token payload storage and minimizing token refresh calls.
- Implemented multithreading and concurrent processing, reducing API response time by 20% on average.
- Configured multiple databases within a microservice to integrate data across different enterprise systems.
- Increased code reusability and maintainability by introducing shared utilities and handlers in both ReactJS and Spring Boot services.
- Built real-time UI alert broadcasting system to notify users about ongoing system issues, reducing production incident reports.

AML Eco-System

Anti–Money Laundering (AML) system for Discover Bank to manage and track cases.

- Developed data retention and purging framework using Spring Framework.
- Built services to validate and synchronize data between PostgreSQL and Redis.
- Stored audit logs and system reports in AWS S3 for compliance and traceability.

KEY ACHIEVEMENTS

API Response Optimization and Performance Improvement

Implemented **advanced multithreading and concurrent architecture** to optimize backend processing and significantly reduce API latency and improved business experience.

GitHub Copilot - AI Development Enablement

Led **team adoption of GitHub Copilot**, enabling developers to leverage **AI-assisted coding** for faster development.

Conducted **technical onboarding sessions and training** for engineering teams to integrate AI-driven workflows into development processes.

Improved **code quality, productivity, and delivery speed** across multiple teams.

SKILLS

PROGRAMMING LANGUAGES
- Java 17
- TypeScript
- JavaScript (ES6)

FRAMEWORKS LIBRARIES
- Spring Boot
- Spring Data JPA
- Spring Security
- ReactJS
- Redux / Redux-Saga
- Junit
- Mockito

DATABASES
- SQL Server
- MongoDB
- Redis

TOOLS
- GitHub Copilot
- Datadog
- Splunk

VERSION CONTROL SYSTEMS
- Git
- GitHub
- Gitlab

DEVOPS CI/CD
- Jenkins
- SonarQube
- AWS
- OpenShift

EDUCATION

BTech - Electronic and Communication Engineering
J.E.C.R.C. Foundation
08/2016 - 12/2020

Higher Secondary Certificate (HSC)
St. Edmunds School
07/2014 - 05/2015
