JOHNBASHA KAMRUDEEN

Lead Software Engineer / Technical Lead / Senior Software Engineer

+91 9787892499 | kpjbasha@gmail.com | http://www.linkedin.com/in/john-basha-kamrudeen

Leveraging expertise in Payment Systems, Microservices Architecture, and scalable Backend Engineering to build high-performance, secure solutions while driving technical excellence, innovation, and team success.

Education

2015
Bachelor of Engineering (B.E.) – Computer Science
Srinivasan Engineering College, Perambalur

Core Competencies

- Payment Systems Architecture
- Microservices Architecture
- Backend Integration
- Payment Gateway Integration
- Distrubuted Systems Design
- High-Volume Transaction Processing
- Solution Architecture & API Development
- Technical Leadership & Team Development
- Platform Modernization & Performance Optimization

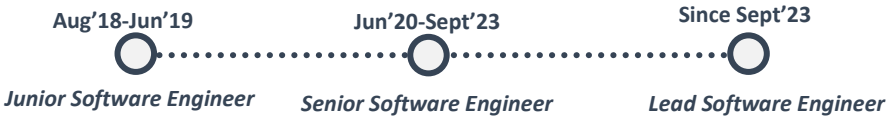

Profile Summary

- Accomplished Technical Leader with **9+ years of expertise** in architecting and delivering **enterprise-scale payment switching, card issuance, and digital payment platforms**, specializing in **cloud-native microservices, distributed systems, and high-volume transaction processing** across global payment ecosystems.
- Driving **end-to-end engineering initiatives** from **solution architecture and product design to production deployment**, leading **cross-functional development teams**, establishing **engineering best practices**, and delivering **secure, scalable, and highly available payment solutions** aligned with business objectives.
- Architected and delivered a **next-generation Prepaid & Gift Card Issuance Platform** from the ground up, integrating **multiple card issuers, payment gateways, and financial networks** while enabling **secure, multi-tenant issuance capabilities** for global merchants.
- Spearheaded **platform modernization** and **event-driven architecture transformation**, increasing **transaction processing capacity from ~100 TPS to 2,000 TPS** while improving **application performance by 15–20%** through technology upgrades, architectural optimization, and system scalability enhancements.
- Expertise across the **payments ecosystem**, including **ISO 8583, ISO 20022, IMPS, UPI, Bharat QR, POS, ATM, NPCI, TCH, PCI-DSS, and VAPT**, with proven success in delivering **secure API-driven payment solutions** that meet **stringent regulatory and compliance standards**.
- Recognized for building **high-performing engineering teams** through **technical mentorship, code quality governance, CI/CD implementation, API standardization, and engineering excellence**, successfully delivering **120+ enterprise-grade APIs** while accelerating **product delivery** and ensuring **operational reliability**.

Work Experience

Since Aug'18 | OGS Paylab Pvt. Ltd.

Growth Path:

Lead Software Engineer

- Leading the design, architecture, and development of a cloud-native Prepaid & Gift Card Issuance Platform, enabling secure card issuance through multiple card issuers and payment gateways.
- Architecting event-driven microservices and scalable backend solutions while driving API development, authentication frameworks (JWT/JWE/JWS), and role-based access control.
- Leading engineering teams through technical mentoring, code reviews, release management, and CI/CD best practices, delivering 50+ enterprise APIs.
- Driving platform modernization through Spring Batch-based bulk processing, transaction reconciliation, and payment security enhancements.

Senior Software Engineer

- Designed and developed high-performance payment switching and card issuance solutions, including IMPS integration with NPCI and The Clearing House (TCH) network integration.
- Engineered 70+ RESTful APIs supporting payment processing, fund transfers, and card management while ensuring secure, scalable, and maintainable application architecture.
- Delivered critical payment features including transaction notifications, Multi-TID support, and transaction acknowledgement, following Test-Driven Development (TDD) practices.

Certifications

- The Clearing House (TCH) Network Certification
- PCI DSS Compliance Certification
- Vulnerability Assessment & Penetration Testing (VAPT)

Junior Software Engineer

- Delivered end-to-end application development from requirements analysis through production deployment for enterprise payment applications.
- Developed responsive web applications using Spring MVC, JSP, and Java, while implementing HSM-based Remote Key Loading and application security enhancements.
- Strengthened application security by remediating OWASP Top 10 vulnerabilities and collaborating with cross-functional teams to ensure timely project delivery.

Technical Skills

Programming Languages: Java 8, Go (Golang), JavaScript, React.js, Node.js, JSP, HTML, CSS, SQL
Frameworks & Libraries: Spring Framework, Spring Boot, Spring MVC, Spring Batch, Hibernate (ORM), JUnit 5, Mockito, Jackson, jQuery
Backend & API Development: RESTful APIs, Microservices Architecture, Event-Driven Architecture, API Gateway (Zuul), JWT Authentication, JWE, JWS, Role-Based Access Control (RBAC), API Security
Messaging & Streaming: Apache Kafka, IBM MQ, AWS SQS
Databases & Caching: MySQL, Microsoft SQL Server, SQLite, Redis Cache
Security & Compliance: OWASP Top 10 Remediation, PCI DSS, VAPT (Vulnerability Assessment & Penetration Testing), Authentication & Authorization, API Security, Secure Payment Processing
Testing & Performance: Test-Driven Development (TDD), Unit Testing, JMeter, Performance Optimization
Build & DevOps: Maven, CI/CD, Build & Release Management
Web & Application Servers: Apache Tomcat, Nginx
Development & Collaboration Tools: IntelliJ IDEA, Eclipse, Postman, JIRA, Confluence, Bitbucket, JasperReports

Personal Details

Address	: Chennai – 600033
Languages Known	: English, Hindi & Tamil
