KSHITIJ KUMAR

Software Engineer — Java | Spring Boot | Microservices | Kafka

Pune, Maharashtra, India | 7803806449 | kshitijkumar.sde@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Java Software Engineer with **5+ years of experience** building scalable, event-driven backend systems using **Java, Spring Boot, Microservices, REST APIs, Kafka, and Hibernate**. Strong in **DSA, multithreading, and design patterns**, with experience building fault-tolerant architectures using **retry logic, Circuit Breaker, and DLQ**, reducing production issue resolution time by **25%**. Experienced in **client requirement analysis, code reviews, mentoring, and cross-functional collaboration** across banking and fintech domains.

CORE SKILLS

- **Languages & Frameworks:** Java, J2EE, Spring Boot, Spring MVC, Spring Security, Hibernate, Servlet, JSP
- **Backend & Messaging:** RESTful APIs, Microservices Architecture, Apache Kafka, Message Queues, Event-Driven Architecture, JWT, OAuth2
- **Core CS & Design:** Data Structures & Algorithms (DSA), Multithreading, Design Patterns (MVC, Microservices, Circuit Breaker), API Documentation (Swagger/OpenAPI)
- **Databases:** SQL, Oracle, MySQL
- **Cloud & DevOps:** AWS (IAM), Docker, Jenkins, Maven, CI/CD
- **Frontend:** React.js, React Native, TypeScript, JavaScript, HTML, CSS, AJAX
- **Tools & Practices**: Git, Bitbucket, Jira, Agile/Scrum, Code Reviews, Log4j, Production Support
- **AI-Assisted Development:** GitHub Copilot, Cursor, Windsurf

PROFESSIONAL EXPERIENCE

Mind Nerves Technology Services Pvt. Ltd. — Pune, India — Sep 2021 – Present

Software Engineer

- Developed and maintained **Java-based banking applications** for clients including **SBI Card, Edelweiss, and DMI Finance**, implementing approval workflows, payment tracking, schedulers, and business-rule processing using the **Spring Framework and Spring Boot**.
- Re-architected legacy hardship-processing workflows into scalable **Spring Boot Microservices**, exposing **REST APIs** and integrating **Hibernate, SQL/MySQL, and Apache Kafka** for reliable event-driven communication.
- Designed and implemented a rules-driven **waiver budget control engine** to enforce waiver limits across hierarchical field structures, improving business-rule consistency and reducing manual processing.
- Implemented **Kafka-based event processing** with idempotent consumers, retry mechanisms, and **Dead Letter Queues (DLQ)** to improve fault tolerance and prevent duplicate transaction processing.
- Optimized scheduler processing using **Java multithreading and concurrent programming**, enabling independent account workloads to be processed concurrently and improving batch-processing efficiency.
- Applied **Circuit Breaker and resilience patterns** for communication between microservices and downstream systems, improving application reliability during transient service failures.
- Built secure and scalable **RESTful APIs** using **Java, Spring Boot, Spring Framework, and Microservices**, with **JUnit** test cases for unit-level validation and regression coverage.
- Developed and maintained responsive UI components using **React.js, JavaScript, and TypeScript**, integrating frontend applications with backend REST APIs and implementing client-side validations.
- Contributed to **CI/CD pipelines** using **Jenkins**, supporting automated build, testing, and deployment processes; worked with **Git/GitHub** for version control and collaborative development.
- Containerized backend services using **Docker**, supporting consistent development and deployment environments and simplifying microservice execution.
- Contributed to **AWS-based application deployment and cloud environments**, supporting scalable backend services and production operations.
- Led full-stack development and production issue resolution across **Java, Spring Boot, React.js, REST APIs, SQL, and Microservices**, contributing to a **25% reduction in issue-resolution time** and improved system reliability.
- Participated in Agile delivery using **Jira, Git/GitHub, CI/CD, and code reviews**, while mentoring peers on architecture, coding standards, testing, and overall code quality.

Robust Digital Solution — Bhopal, India — Jul 2020 – Aug 2021

Java Developer Intern

- Implemented backend and web modules using Java, J2EE, Spring, JDBC, Servlets, JSP, HTML, CSS, and JavaScript, contributing to a 20% reduction in project delivery timelines.
- Designed a template management module for reusable bulk email and SMS communication templates.
- Applied Spring IOC, DAO, and MVC design patterns to build CRUD functionality and improve application structure.

KEY PROJECTS

Fin Advisor & Multi-Tenant Authentication Service (Self-built)

- Built a microservices-based financial platform using Spring Boot, Kafka, React, TypeScript, React Native, and Resilience4j, supporting financial tracking and transaction processing.

- Developed AI-assisted bank statement parsing and transaction classification to automate extraction and categorization of financial transactions.
- Designed a multi-tenant authentication and authorization service using Spring Security, JWT, and OAuth2, with tenant-level data isolation.
- Implemented resilient inter-service communication using Kafka, retry mechanisms, and Circuit Breaker patterns.
- Developed web and mobile interfaces using React and React Native and deployed backend services on AWS with IAM-based access control.

EDUCATION

RGPV University — Bhopal, India **May 2016 – Aug 2020**

B.E. in Computer Science

ACHIEVEMENTS

- Instant Champ Award — Honoured 3 times at Mind Nerves Technology Services for outstanding performance.
