KAMALJEET VARMA

Senior Java Developer | Spring Boot | Microservices | REST APIs | Cloud-Integrated Systems
contactkamaljeetvarma@gmail.com | +91 8669010957 | India

PROFESSIONAL SUMMARY

Senior Java Developer with 7+ years of enterprise IT experience developing and delivering secure, scalable REST APIs and microservices for Fortune clients across Banking, Airline, and Life Sciences domains. Strong track record of building layered Spring Boot applications, implementing JWT-based Spring Security, and integrating third-party platforms including Salesforce and Microsoft Graph API. Experienced with AWS cloud services (S3, Dead Letter Queues) for scalable data storage and fault-tolerant processing. Agile practitioner proficient in Git, Jenkins, and SonarQube, with a consistent record of end-to-end module ownership — from low-level design through production support — and cross-functional collaboration with QA and frontend teams.

CORE TECHNICAL COMPETENCIES

Languages & Core	Java 8, J2EE, SQL
Frameworks	Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Reactive Programming
API & Integration	RESTful APIs, JWT Authentication, REST Template, Microservices Architecture, Salesforce API, Microsoft Graph API, Mule ESB (Anypoint Studio)
Cloud & DevOps	AWS (S3, Dead Letter Queue), PCF (Pivotal Cloud Foundry), Jenkins (CI/CD)
Databases	PostgreSQL, MySQL, Oracle, DB2, MongoDB (SQL & NoSQL)
Version Control & QA	Git, Bitbucket, RTC, SonarQube, Checkmarx, AppDynamics, Splunk
Methodologies	Agile/Scrum, Full SDLC, Low-Level Design (LLD), Functional Design Documentation
Tools	IntelliJ IDEA, Eclipse, STS, Anypoint Studio, JIRA, Maven, Postman

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Concentrix Catalyst

29-July 2024 – Present

Team Size: 18

Project: MilliporeSigma Loyalty Program (Client: MilliporeSigma)

- Delivered a secure, JWT-authenticated loyalty and rewards API suite for a Fortune life-sciences client by implementing Spring Security across all customer-facing endpoints, reducing exposure to unauthorized access.
- Improved third-party data synchronization performance by redesigning the Salesforce integration layer using REST Template with optimized connection handling and error retry logic.

- Strengthened code maintainability across a distributed engineering team by establishing a clean layered architecture (controller-service-client) and enforcing standards through structured code reviews.
- Enabled efficient bulk processing of transaction history and point-redemption workflows by leveraging Java 8 Streams and Collections for optimized in-memory data transformations.
- Ensured seamless frontend-backend integration by authoring comprehensive API documentation and proactively collaborating with the React.js frontend team on contract design.
- Delivered production-grade reliability by implementing standardized exception-handling patterns and structured JSON error responses across all endpoints.
- Reduced regression risk on new releases by writing comprehensive JUnit unit and integration test suites, validated jointly with QA before each release cycle.
- Built full CRUD lifecycle support for integration configuration management through well-documented RESTful endpoints.

Environment: *Java 8, Spring Boot, Spring Security, REST APIs, JWT, Salesforce API, IntelliJ, Maven, Git, React.js (integration)*

Senior Software Engineer | Wipro *28-March-2022 – 15-July-2024*

Team Size: 12

Project: Airline Bidding Application (Client: JetBlue Airlines)

- Enabled flexible, self-service crew scheduling for airline operations staff by designing REST APIs with Reactive Programming to support real-time roster CRUD operations across flight and cabin crew types.
- Reduced manual scheduling errors by implementing custom validation logic for calendar-based (monthly/weekly) and customized roster cycles.
- Improved record retrieval performance by optimizing PostgreSQL query patterns and indexing strategy behind the crew-search API.
- Ensured reliable, low-risk deployments by coordinating closely with the Angular frontend team and the Tomcat deployment pipeline.

Project: Payment Processing Platform (Client: Credit Suisse Bank)

- Automated self-service transaction reporting for bank customers by designing a QR-based transaction report request API integrated with the bank's reporting engine, eliminating manual report-generation requests.
- Improved customer experience for recurring reporting needs by building configurable, schedule-driven Spring Boot report-generation services supporting daily, weekly, and monthly cadences.

Environment: *Java, Spring Boot, REST APIs, Reactive Programming, PostgreSQL, Angular, Tomcat, IntelliJ*

Software Engineer | Xebia IT Architects India Pvt. Ltd. *11-February-2021 – 27-March-2022*

Team Size: 15

Project: Home Loan Application (Bank Loan Management System)

- Streamlined end-to-end digital loan processing for both bank staff and customers by designing the customer-facing loan application and real-time status-tracking API.
- Ensured accurate EMI and loan lifecycle management by implementing the EMI computation and loan-transaction Microservices layer using Spring Boot.

Software Engineer | Persistent Systems Ltd. *17- November-2020 – 10-February-2021*

Team Size: 10

Project: Performance and Analytics Application

- Enabled actionable portfolio insights for financial clients by developing REST APIs for portfolio aggregation, return calculation, and report-validation logic using Spring Boot and MySQL.

Environment: *Java, Spring Boot, Microservices, REST APIs, MySQL, IntelliJ*

Software Engineer | **HSBC** *03-June-2019 – 10-November-2020*

Team Size: 18

Project 1: PSD2 / Open Banking – Process API Development

- Delivered secure, standards-compliant Open Banking connectivity by designing a Mule-based Process API that brokered secure requests between AWS experience APIs and backend System APIs, supporting live integrations with Google Pay, BHIM, and commercial banking third-party applications.
- Ensured reliable account-data retrieval at scale by implementing robust REST call orchestration between the Process API and System API layers using Anypoint Studio.

Project 2: Sarbanes–Oxley Act (SOX) Commercial Banking Report Generator

- Automated regulatory compliance reporting by building a JReport-based automated report generation and email delivery pipeline integrated with DB2.
- Enabled self-service report access for banking staff by developing a database-backed file download portal for on-demand report retrieval.

Environment: *Java, Spring Boot, Mule (Anypoint Studio), JReport, DB2, MySQL, Eclipse*

KEY RESPONSIBILITIES ACROSS ROLES

- Own full Software Development Life Cycle (SDLC) execution — requirement analysis through production support — for enterprise-scale Java applications.
- Lead Low-Level Design (LLD) and Functional Design Document (FDD) creation, translating business requirements from onsite coordinators and clients into technical specifications.
- Drive Agile ceremonies — sprint estimation, planning, and stakeholder status calls — across distributed, cross-functional teams.
- Champion code quality via SonarQube/Checkmarx static analysis and structured JUnit-based testing strategy.
- Conduct root-cause investigation and resolution for production incidents, minimizing customer-facing downtime.

EDUCATION

Bachelor of Engineering (B.E.) — Dr. Babasaheb Ambedkar Marathwada University (BAMU)
Higher Secondary Certificate (HSC) — Maharashtra State Board
Secondary School Certificate (SSC) — Maharashtra State Board

ACHIEVEMENTS & ACTIVITIES

- Presented a technical paper at the National Level Technical Paper Presentation, Government College of Engineering, and Aurangabad.
- Served as Student Co-coordinator, TECHNO-EXPERTS 2012 Technical Festival.
