PRATHAMESH WANI

Senior Software Engineer | Java, Spring Boot, Microservices, Kafka | Payments

prathameshwani99@gmail.com | +91 8308399141 | LinkedIn| Pune, Maharashtra, India

PROFESSIONAL SUMMARY

Senior Software Engineer with 5.9 years of experience designing, building and leading distributed backend systems for a high-throughput payment platform (~10,000 TPS, 99.9% uptime). Deep expertise in Java, Spring Boot microservices, event-driven architecture (Kafka) and distributed caching (Redis, Infinispan), with hands-on ownership across development, DevOps and cloud-native deployment (Docker, Kubernetes, AWS). Delivered measurable outcomes: **90% reduction in database load**, **80% fewer fraudulent transactions** and merchant onboarding cut from **2 weeks to 3 days**. Progressed from System Analyst to Team Lead, combining strong architecture and security skills with client-facing requirement analysis and mentoring in Agile, globally distributed teams.

TECHNICAL SKILLS

Languages & Frameworks: Java (8 - 21), HTML5, CSS, JavaScript, Spring Boot, Spring MVC, Spring Security, Spring Data, Spring AOP, Spring Batch, Hibernate/JPA, gRPC, JDBC

Architecture & Design: Microservices, REST API Design, Event-Driven Architecture, Distributed Caching, High-Throughput / Low-Latency Systems, Design Patterns, SOLID Principles

Messaging & Databases: Apache Kafka, Redis, Infinispan, MySQL, Oracle, PostgreSQL, SQL Server, MongoDB

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Maven, Eureka, Linux

Security & Payments: OAuth, JWT, HMAC, KeyCloak, ISO 8583, jPos, Apple Pay, Google Pay, Klarna, Paze

Quality & Observability: JUnit, Mockito, API Automation Testing, SonarQube, Grafana, Graylog

Leadership & Tools: Team Leadership, Mentoring, Requirement Gathering, Agile/Scrum, Git, IntelliJ IDEA, GitHub Copilot, Claude CLI

PROJECTS

Aurus Tech Private Limited — **Dec 2020 – Present**

Senior Software Engineer (Team Lead)

AurusPay | *Payment Switch – Core Transaction Processing & Routing*

- Built core services of the payment switch that sits between the gateway and acquiring processors, executing the business logic for authorization, capture, void and refund flows.
- Implemented rule-based routing to direct traffic to the right processor (WorldPay, Fiserv, Chase Paymentech and others) by merchant, card type, region and configuration, so new processors can be onboarded without disrupting live traffic.
- Handled timeouts, reversals and failover paths to keep transactions consistent and the platform highly available.

Ecom-StoreServices | *High-Availability Payment Gateway (~10,000 TPS, 99.9% uptime)*

- Led design and delivery of Spring Boot microservices powering the payment gateway, owning services across development and DevOps.
- Cut database hits by **~90%** with a Kafka-synchronised Infinispan cache and database layer, enabling low-latency short payment URLs at scale.
- Integrated Apple Pay, Google Pay, Klarna and Paze, expanding payment options for merchants while strengthening authentication and compliance.
- Built a custom iFrame and Pay Page so merchants can embed secure, branded checkout into their own platforms.

Kavach | *Fraud Prevention Layer*

- Designed a Redis-based distributed API rate limiter with configurable thresholds, reducing fraudulent transactions by **80%** by blocking bot-driven and high-frequency abuse.
- Added HMAC payload encryption and Subresource Integrity (SRI) checks to protect payment pages from tampering and supply-chain attacks.

Prarambh | *Merchant Self-Onboarding Platform*

- Enabled 20+ merchants across the US and Canada to register, configure and go live without manual intervention.
- Reduced onboarding turnaround from **2 weeks to 3 days**, freeing operations effort and speeding revenue start.

EDUCATION

Pune University – Master of Computer Applications (MCA), 84 % — 2021 – 2023

Pune University – Bachelor of Computer Applications (BCA), 71 % — 2017 – 2020
