PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 5+ years of experience building scalable, secure, and high-performance enterprise applications using Java (8/11/17), Spring Boot, Microservices, and RESTful APIs. Hands-on expertise in AWS (EC2, S3, Elastic Beanstalk), MySQL, Hibernate/JPA, and React.js, with a proven record of reducing API latency by 50%, improving security posture by 30%, and boosting application performance by 40% through architectural improvements and code optimisation. Proven Technical Lead with experience mentoring teams, driving Agile delivery, and translating complex business requirements into production-ready solutions.

TECHNICAL SKILLS

Languages: Java (8/11/17), JavaScript (ES6+), SQL

Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Microservices, Hibernate

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Bootstrap, REST API Integration, Responsive Web Design

Cloud & DevOps: AWS (EC2, S3, Elastic Beanstalk), Docker, Git, GitHub, Bitbucket, CI/CD basics

Databases & ORM: MySQL, JPA, Hibernate, query optimisation, indexing

API & Testing: RESTful API design, Swagger/OpenAPI, Postman, JUnit

AI-Assisted Development: GitHub Copilot, Claude, ChatGPT, Cursor IDE

Tools & IDEs: IntelliJ IDEA, Eclipse, Spring Tool Suite (STS), VS Code, SonarQube

Architecture: Microservices, API Gateway, Circuit Breaker pattern

Soft Skills: Technical Leadership, Agile/Scrum, Mentoring, Stakeholder Communication

PROFESSIONAL EXPERIENCE

Ernst & Young (EY) | Technical Lead ***Aug 2025 – Present***

Hyderabad, India

- Led end-to-end design, implementation, and optimisation of microservices architecture using Spring Boot, driving measurable improvements in system scalability, performance, and long-term maintainability.
- Integrated Spring Security (OAuth2 / JWT) with role-based access control and OWASP-aligned secure coding standards, reducing security vulnerabilities by 30% across production APIs.
- Refactored legacy Java codebase to Java 17 standards — leveraging Streams, Lambdas, and Optional — boosting application performance by 40% with zero production disruption.
- Mentored 5+ junior developers on microservices design patterns, Spring Boot, and security best practices; introduced structured code review processes that improved team delivery velocity and code quality.
- Conducted proactive root cause analysis and performance profiling on production incidents, reducing mean time to resolution (MTTR) and maintaining 99.9% application uptime.
- Enforced code quality standards using SonarQube — identifying and resolving code smells, vulnerabilities, and duplication issues across microservices to maintain a clean, maintainable codebase.

HCL Technologies Limited | Senior Software Developer ***Sep 2024 – Aug 2025***

Vijayawada, India

- Developed and optimised Java Spring Boot features across enterprise applications, resolving critical bugs and delivering major enhancements within Agile sprint cycles.
- Designed and consumed RESTful APIs supporting business-critical workflows, ensuring backward compatibility and adherence to API versioning standards.
- Mentored junior developers through structured code reviews and technical walkthroughs, reducing rework cycles and improving team code quality standards.

SriJay Software Solutions Pvt Ltd / Eightfolds Software Technologies Pvt Ltd | Software Engineer – Java Developer ***Aug 2021 – Aug 2024***

Hyderabad, India

- Architected and developed Java Spring Boot backend services for 6+ production applications across domains including logistics, fintech, EdTech, and recruitment.
- Designed and implemented secure, versioned RESTful APIs consumed by Android, iOS, and web clients — adhering to REST best practices and Swagger documentation standards.
- Managed full AWS deployment lifecycle using EC2 (application servers), S3 (object storage), and Elastic Beanstalk (auto-scaled environments), ensuring 99.5%+ availability.
- Optimised critical MySQL database queries and Hibernate mappings, reducing average query execution time by 40% on high-volume financial datasets.
- Delivered a 50% reduction in API response times on the CBM logistics platform through caching strategies, connection pooling, and code-level optimisation.

KEY PROJECTS

SAC Capital – Investment & Portfolio Management Platform

Tech Stack: *Java 11 | Spring Boot | MySQL | REST APIs | AWS EC2 | AWS S3*

- Built robust backend microservices for real-time investment tracking, portfolio valuation, and financial data synchronisation using Spring Boot and MySQL.
- Optimised database queries handling large-scale financial datasets, reducing reporting latency by 40% through indexing and query refactoring.
- Managed AWS EC2 deployment for application hosting and AWS S3 for secure investment document and image storage.
- Implemented secure REST APIs with role-based access control for high-net-worth client data — meeting strict BFSI compliance requirements.

CBM – Logistics & Driver Tracking Application

Tech Stack: *Java 8 | Spring Boot | MySQL | REST APIs | AWS EC2 | AWS S3*

- Developed and integrated real-time driver tracking, data synchronisation, and customer notification modules — achieving a 50% reduction in API response time.
- Improved overall platform reliability through asynchronous processing and reliable data synchronisation using Spring Boot and MySQL.
- Deployed application on AWS EC2 and used AWS S3 for driver image and document storage with secure pre-signed URL access.

Icon By Amatya – Alternative Investment Mobile App (Android & iOS)

Tech Stack: *Java 17 | Spring Boot | MySQL | REST APIs | AWS EC2 | AWS S3*

- Contributed as Java backend developer for a fintech investment app enabling HNI clients to source, screen, invest in, and track alternative asset classes.
- Built secure APIs for portfolio data aggregation, user authentication (JWT), and transparent transaction management.
- Leveraged Java 17 features (records, sealed classes, enhanced switch) for cleaner, more maintainable domain models; deployed on AWS EC2 with S3-backed media storage.

Street Jobs – Multi-Lingual Job Portal Platform

Tech Stack: *Java 17 | Spring Boot | MySQL | REST APIs | AWS EC2 | AWS S3*

- Engineered multi-lingual REST APIs supporting diverse vendor needs across Indian markets, handling locale-specific content for 10+ regional languages.
- Designed scalable backend architecture mirroring job portals like Naukri and Indeed, enabling high-concurrency job search and vendor management.
- Deployed and managed application on AWS EC2; used S3 for storing vendor profile images and job-related media assets.

Def-ISL – Indian Sign Language EdTech Platform

Tech Stack: *Java 11 | Spring Boot | MySQL | REST APIs | AWS EC2 | AWS S3*

- Served as backend developer for an accessibility-focused educational platform; collaborated with educators and ISL experts to build features for effective pedagogy and inclusivity.
- Built content management APIs for ISL video and image assets stored in AWS S3, with EC2-hosted application backend serving mobile and web clients.

BNA Hitech Attendance – Enterprise Attendance Tracking System

Tech Stack: *Java 11 | Spring Boot | MySQL | REST APIs | AWS EC2 | AWS S3*

- Designed and implemented secure backend modules for user authentication, session management, and weekly meeting attendance tracking.
- Deployed on AWS EC2 with S3 integration for storing attendance reports and user profile images; ensured data integrity through transaction management and audit logging.

EDUCATION

B.Tech in Computer Science & Engineering ***2016 – 2020***

DRK College of Engineering & Technology, Bowrampet, Telangana, India

CERTIFICATIONS

Full Stack Java Developer – Talentsprint ***Feb – Jul 2021***

KEY ACHIEVEMENTS

- Delivered 50% reduction in API response times on the CBM platform through targeted performance profiling, connection pooling, and query-level optimisation.
- Reduced security vulnerabilities by 30% at EY by implementing Spring Security with JWT/OAuth2, RBAC, and OWASP secure coding standards across enterprise REST APIs.
- Successfully architected, deployed, and maintained AWS cloud infrastructure (EC2, S3, Elastic Beanstalk) for 6+ production applications across fintech, logistics, and EdTech domains.
- Promoted from Software Engineer to Technical Lead within 3 years, taking ownership of architecture decisions, team mentorship, and cross-functional stakeholder delivery.
- Mentored 5+ junior developers across two organisations, building structured code review and onboarding processes that improved team delivery consistency and reduced bugs in production.
