SUNIL MARATHE

SENIOR JAVA BACKEND DEVELOPER

Pune, India | +91 9834683037 | sunilmahadumarathe@gmail.com | linkedin.com/in/sunilmarathe

PROFESSIONAL SUMMARY

Highly accomplished Senior Java Backend Developer with 7.5+ years of software engineering experience specializing in robust enterprise application development, micro services architecture, and cloud-native distributed ecosystems. Proven expertise in designing, engineering, and launching high-performance and scalable backend platforms from scratch using Java 11/17, Spring Boot, Spring Security, and RESTful APIs. Expertise in designing event-driven communications, data layer optimization using SQL Server and MongoDB, and implementing rigorous application security safeguards matching OWASP Top 10 vulnerabilities. Adept at containerizing workloads with Docker and orchestrating them via Kubernetes clusters to optimize service reliability and transaction throughput across banking, financial services, and e-commerce domains.

CORE TECHNICAL SKILLS

- **Programming:** Java 11, Java 17, J2EE, Multithreading, OOPs, Collections, Exception Handling, Performance Tuning
- **Backend Frameworks:** Spring Framework, Spring Boot, Spring Security, Spring Cloud, Spring MVC, REST APIs, API Design
- **Data & Databases:** JPA, Hibernate ORM, SQL Server, MongoDB, Relational Databases, PostgreSQL
- **Messaging & Cloud:** Apache Kafka, AWS (EC2, S3, IAM), AWS Lambda, RabbitMQ
- **Application Security:** OAuth 2.0, JWT, RBAC, OWASP Top 10, Rate Limiting, Throttling, Payload Validation, PII Masking
- **Testing & Code Quality:** JUnit, Mockito, Test-Driven Development (TDD), Unit Testing, SonarQube, Code Coverage (80%+)
- **Tools & DevOps:** Docker, Kubernetes, Jenkins, Maven, Git, GitHub, Jira, CI/CD Pipelines

PROFESSIONAL EXPERIENCE

Bienes Technosoft Pvt. Ltd. — *Senior Software Engineer* **2025 – Present**

Project: Enterprise Scalable Core Travel Platform (Chennai, India)

- Designed and developed highly scalable enterprise core backend application software components entirely from scratch utilizing Java 17 and Spring Boot.
- Engineered robust distributed business logic layers and structured clean Micro services architecture configurations to maximize platform service availability.
- Built and optimized reliable secure RESTful APIs to guarantee flawless request execution and secure high-velocity application communications processing.
- Enforced robust authorization and authentication standards across all distributed endpoints using Spring Security, minimizing security exposure loops.
- Orchestrated backend application workloads using Docker containerization and Kubernetes cluster deployment strategies incorporating health checks and auto scaling.

• Implemented rigorous unit testing structures using JUnit and Mockito within Test-Driven Development (TDD) environments to exceed 80% code coverage standards.

Coforge Pvt. Ltd. — *Senior Software Engineer* **2024 – 2025**

Client & Project: HSBC — High-Security Secure Banking API Gateways (Pune, India)

• Engineered and deployed core banking Web API architecture and secure messaging components from scratch following strict domain-driven application boundaries.

• Spearheaded critical identification and backend application level remediation of API vulnerabilities targeting OWASP Top 10 flaws like BOLA and Mass Assignment.

• Hardened banking backend infrastructure by implementing strategic API rate limiting, payload validation, and configuring edge API Gateways to securely mask PII data.

• Integrated robust automation code quality gates within CI/CD loops using SonarQube to eliminate critical architectural code smells prior to production environments.

Gensol Infotech Pvt. Ltd. — *Software Engineer* **2022 – 2024**

Client & Project: Axis Mutual Fund — Financial Micro services Platform (Bengaluru, India)

• Developed, optimized, and managed highly performant multi-tier enterprise transaction backend architectures leveraging Java 11 and Spring Boot.

• Engineered decoupled asynchronous processing pipelines using Apache Kafka messaging streams to interface dynamically with external banking networks and gateways.

• Architected highly resilient relational and non-relational database access layers incorporating JPA, Hibernate ORM, SQL Server, and MongoDB templates.

Trigent Software Pvt. Ltd. — *Software Engineer* **2022**

Project: Enterprise Asset Maintenance System (Pune, India)

• Contributed to core product development goals, building concurrent, asynchronous Java Spring Boot services to ingest heavy analytical pipelines with high throughput.

• Refactored relational data access objects and performed database query tuning setups to maximize processing execution and lower transaction latency responses.

Mobile Programming Pvt. Ltd. — *Software Engineer* **2021**

Project: Jio Mart — Distributed E-Commerce Backend Integration Engine (Pune, India)

• Engineered robust transactional catalog structures, cart workflows, and checkout business logic validation modules from scratch using Spring Boot and Hibernate ORM.

• Built robust marketplace synchronization APIs and structured secure integration points with external frameworks to keep inventory pipelines consistent.

Siddhesh Infotech Pvt. Ltd. — *Software Engineer* **2017 – 2021**

Project: NextGen Digital Healthcare & Pathology ERP Platform (Dhule, India)

• Programmed and maintained core Java backend modules for healthcare ERP management setups, strengthening application data flows and collection structures.

• Integrated secure multi-tenant database mapping profiles using clean SQL scripts and custom data object models inside SQL Server and MongoDB systems.

EDUCATION & LANGUAGES

B.E. (Information Technology) — G.C.E. College of Engineering, Nagaon | Graduated: 2014
HSC (Class XII) — Maharashtra State Board, Dhule | Passed: 2008
SSC (Class X) — Maharashtra State Board, Dhule | Passed: 2006
Languages Known: English, Hindi, Marathi
