SURAJ KUMAR SINGH

Java Microservices Specialist | Banking Technology Professional | Enterprise Application Developer

+91 8093962251 | kumarsurajsingh93@gmail.com | linkedin.com/in/surajsingh93

Accomplished Senior Java Developer seeking challenging opportunities in Backend Application Development, Microservices Architecture, and Enterprise Software Engineering within the Banking, Financial Services, FinTech, and Digital Payments industry, leveraging nearly 10 years of experience in designing scalable enterprise applications, modernizing banking platforms, and delivering high-performance software solutions that drive business growth and digital transformation.

Core Competencies

- Enterprise Application Development
- Backend Engineering
- Microservices Architecture
- Banking Application Development
- Payment Systems Development
- Financial Messaging Solutions
- REST API Integration
- SDLC & Agile Delivery
- Application Modernization

Technical Skills

Programming Languages: Java 8, ReactJS, Node.js, Unix

Frameworks & Technologies: Spring Boot, Spring Security, Spring Data JPA, Spring Cloud, Spring AI, Microservices, REST APIs

Messaging & Integration: Apache Kafka, SWIFT Translator

Databases: Oracle Database

DevOps & Cloud: Docker, Kubernetes, Jenkins

Version Control: Git, Bitbucket

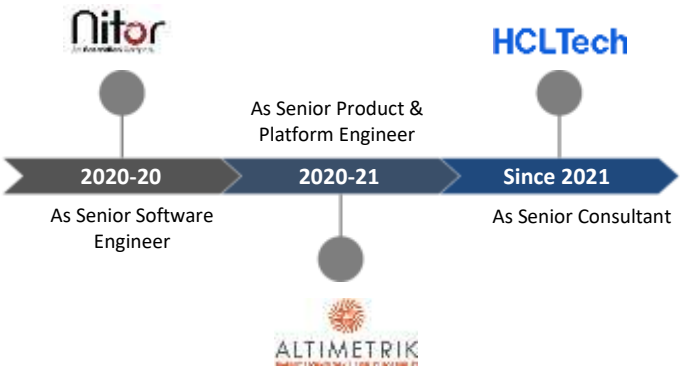

Testing & API Tools: JUnit, Postman

Development & Collaboration Tools: IntelliJ IDEA, Jira, Splunk

Profile Summary

- Possess nearly **10 years of professional experience** in designing, developing, and maintaining enterprise-grade Java applications with expertise in Spring Boot, Microservices, REST APIs, distributed systems, and cloud-native application development for Banking, Financial Services, and Enterprise Technology domains.
- Demonstrated success in delivering mission-critical banking platforms including Payment Lifecycle Management, Customer Entitlement Workflow, SWIFT Messaging, Risk Management, and Card Management applications while collaborating with global cross-functional Agile teams throughout the Software Development Life Cycle (SDLC).
- Extensive experience in architecting scalable backend services, integrating enterprise applications through REST APIs and Kafka messaging, optimizing application performance, enhancing code quality using JUnit and SonarQube, and implementing containerized deployments using Docker and Kubernetes.
- Strong expertise in translating business requirements into secure, high-performing technical solutions by leveraging Java 8, Spring Boot, Spring Security, Spring Data JPA, Oracle Database, ReactJS, CI/CD practices, and cloud technologies to improve application reliability, maintainability, and customer experience.
- Experienced in collaborating with solution architects and business stakeholders for technical solution design, application modernization initiatives, and release planning across enterprise banking environments.
- Strong exposure to production support, application monitoring, deployment governance, and continuous process improvement to ensure high availability, operational stability, and seamless delivery of business-critical applications.

Career Timeline (Recent 3)

Work Experience

HCL Technologies | Senior Consultant
15 November 2021 – Present | Pune, Maharashtra

- Developing and maintaining enterprise-grade banking applications using Java, Spring Boot, Microservices, Kafka, Docker, and RESTful APIs.
- Designing and implementing new SWIFT MT message mappings and financial message transformation solutions, significantly enhancing client transaction processing capabilities.
- Developing scalable REST APIs and backend services for Payment Lifecycle Management (PLCM) applications supporting critical banking operations.
- Building ReactJS-based upstream applications to facilitate seamless communication across enterprise systems.
- Collaborating with business stakeholders, architects, QA teams, and cross-functional Agile squads to deliver high-quality software releases.
- Designing and developing new functional modules aligned with evolving business and regulatory requirements.
- Integrating Kafka-based event-driven communication for distributed microservices.
- Leveraging Docker & OpenShift platforms for application deployment & container orchestration.
- Implementing Spring Security & Spring Data JPA for secure & efficient backend development.
- Participating in sprint planning, backlog refinement, code reviews, estimation, and production deployments while ensuring adherence to coding standards.

Certification

Google Cloud Platform – Associate Cloud Engineer (ACE)

Key Highlights

HCL Technologies | Senior Consultant

- Increased client interaction by nearly 30% through implementation of new SWIFT message mappings.
- Improved customer engagement by approximately 20% through development of scalable REST APIs.
- Successfully delivered four new business modules supporting enterprise banking operations.
- Acquired expertise in SWIFT Translator, Kafka, Docker, and OpenShift technologies within enterprise banking projects.

Altimetrik India Pvt. Ltd. | Senior Product & Platform Engineer

- Improved application quality through 90% code coverage.
- Delivered scalable microservices supporting customer entitlement workflows.

Nitor Infotech Pvt. Ltd. | Senior Software Engineer

- Reduced application response time by 20%.
- Increased code quality score by 70%.

Calsoft Pvt. Ltd. | Senior Software Development Engineer

- Increased code coverage to 80%.
- Improved code quality to 75%.

Infosys Limited | Senior Systems Engineer

- Increased customer interactions by approximately 30% through API development.
- Improved code coverage to 85%.

- Driving application performance optimization initiatives to improve response time and system scalability.
- Supporting production releases, defect triaging, root cause analysis, and application stabilization activities.
- Mentoring junior developers through code reviews, technical guidance, & best development practices.
- Contributing to technical solution design, architecture discussions, and continuous improvement initiatives for enterprise applications.

Altimetrik India Pvt. Ltd. | Senior Product & Platform Engineer
07 September 2022 – 11 November 2021 | Bengaluru, Karnataka

- Developed and enhanced enterprise banking microservices using Java and Spring Boot.
- Created comprehensive JUnit and functional test cases that increased application code coverage to approximately 90%.
- Participated in business requirement discussions to translate functional needs into technical solutions.
- Designed business process flow diagrams & activity diagrams supporting application development.
- Contributed to development of multiple microservices covering consent initiation, beneficiary management, and reference data resolution.
- Collaborated with Agile teams during sprint planning, estimation, testing, and deployment activities.

Nitor Infotech Pvt. Ltd. | Senior Software Engineer
23 January 2020 – 04 September 2020 | Bengaluru, Karnataka

- Developed enterprise backend applications using Java, Spring Boot, REST APIs, and Oracle Database.
- Optimized complex SQL queries, reducing database response time by nearly 20%.
- Developed reusable, loosely coupled application components that improved maintainability.
- Improved SonarQube code quality by approximately 70%.
- Managed backend development, deployment, and production support activities.
- Worked independently while delivering high-quality application enhancements within project timelines.

Calsoft Pvt. Ltd. | Senior Software Development Engineer
17 June 2019 – 17 January 2020 | Pune, Maharashtra

- Developed enterprise risk management applications using Java and Spring technologies.
- Created JUnit and functional test cases achieving approximately 80% code coverage.
- Improved SonarQube quality metrics to nearly 75%.
- Resolved User Acceptance Testing (UAT) defects and production issues.
- Developed backend APIs supporting enterprise risk management functionalities.
- Collaborated with QA teams to improve application reliability.

Infosys Limited | Senior Systems Engineer
04 July 2016 – 17 May 2019 | Pune, Maharashtra

- Developed enterprise banking applications using Java, Spring Boot, Maven, RESTful APIs, Oracle Database, and Microservices.
- Designed and developed REST APIs supporting Order Business Debit Master Card (OBDMC) applications.
- Created JUnit and functional test cases that improved SonarQube coverage to 85%.
- Utilized Jira, Bitbucket, Splunk, and Confluence for Agile software delivery.
- Collaborated with cross-functional teams to deliver banking application enhancements.
- Participated in production deployments and application maintenance activities.

Projects

PLCM (Payment Life Cycle Management)
Organization: HCL Technologies
Duration: January 2023 – Present

- Developed and enhanced backend microservices for the Payment Life Cycle Management (PLCM) platform, a mission-critical banking application comprising multiple interconnected services.
- Contributed to key business services including Posting, Investigation, and Adapter modules, supporting secure and efficient payment processing.
- Designed and developed scalable REST APIs and microservices using Java, Spring Boot, Kafka, Docker, and OpenShift.
- Implemented SWIFT message transformation and backend integrations to streamline financial transaction processing.
- Collaborated with cross-functional teams to deliver new business functionalities and improve application performance and customer experience.

CEW (Customer Entitlement Workflow)
Organization: HCL Technologies
Duration: November 2021 – December 2022

- Developed backend microservices for the Customer Entitlement Workflow (CEW) platform comprising multiple interconnected services supporting enterprise banking operations.

Education

Bachelor of Technology (B.Tech.) – Computer Science & Engineering
Kalinga Institute of Industrial Technology (KIIT), Bhubaneswar, Odisha | **2012 – 2016**

- Built microservices for Consent Initiation, Consent Maintenance, Beneficiary Management, and Reference Data Resolution.
- Developed RESTful APIs using Java and Spring Boot to enable secure customer entitlement and authorization workflows.
- Created comprehensive JUnit test cases and collaborated with Agile teams throughout development, testing, and deployment.

Data Localization
Organization: Altimetric India Pvt Ltd
Duration: September 2020 – November 2021

- Developed backend services for a banking data localization platform supporting payment processing and financial services.
- Implemented secure data localization capabilities to restrict the transfer of sensitive customer information across international borders while allowing only essential transaction data.
- Developed REST APIs using Java, Spring Boot, and Oracle Database to ensure regulatory compliance and secure cross-border banking operations.
- Optimized backend services to improve application performance and maintainability.

RPS (Rapid Plant Setup) | Manufacturing Survey & Asset Management Platform
Organization: Nitor Infotech Pvt. Ltd.
Duration: January 2020 – September 2020

- Developed backend functionalities for a monolithic manufacturing survey application designed to facilitate rapid plant setup and equipment onboarding.
- Built and enhanced multiple REST APIs to support the registration, configuration, and management of plant machinery and associated components.
- Enabled efficient tracking of machine components requiring periodic maintenance and replacement, improving asset lifecycle management.
- Collaborated with business and technical teams to deliver scalable backend solutions aligned with evolving business requirements and operational objectives.
- Contributed to application enhancements, defect resolution, and performance optimization to improve system reliability and user experience.

Customer Dashboard (CD)
Organization: Calsoft Pvt. Ltd.
Duration: June 2019 – January 2020

- Developed backend functionalities for an internal employee management application supporting Timesheet Management, Leave Management, Employee Monitoring, and Event Management.
- Designed and developed REST APIs to streamline internal HR and administrative processes.
- Created JUnit test cases, improved code quality through SonarQube compliance, and resolved application defects to enhance system reliability.

Risk Management Workflow (RMW)
Organization: Infosys Limited
Duration: September 2017 – May 2019

- Developed backend APIs for an enterprise risk management application designed to identify, monitor, and mitigate organizational risks.
- Built RESTful services using Java and Spring technologies to support risk assessment and management processes.
- Developed JUnit test cases that increased code coverage to over **80%**, improving application quality and reducing production defects.
- Collaborated with cross-functional teams to deliver enhancements and maintain application stability.

OBDMC (Order Business Debit Master Card)
Organization: Infosys Limited
Duration: July 2016 – August 2017

- Developed backend services for a banking application supporting electronic customer verification and online debit card ordering.
- Designed and implemented REST APIs to facilitate secure card issuance and verification workflows.
- Collaborated with development and QA teams to deliver application enhancements and support production deployments.
- Contributed to the development of secure and scalable banking solutions aligned with business requirements.
