Shikhar Gupta

Senior Software Engineer

SUMMARY

Senior Software Engineer with around 6 years of experience in Java, Spring Boot, Microservices,AWS, Kafka, Redis, Elasticsearch, and SQL. Experienced in building scalable enterprise applications across financial services and cybersecurity domains, with expertise in REST APIs, distributed systems, and CI/CD.

Professional / Work Experince

Senior Software Engineer(Qualys)

Present

- Designed and developed scalable backend microservices using Java, Spring Boot, Kafka, Redis, Elasticsearch, and AWS, enabling secure and reliable vulnerability management and risk assessment capabilities for enterprise customers.
- Built and optimized REST APIs and event-driven workflows to automate vulnerability assessment, risk prioritization, remediation tracking, and security analytics, improving operational efficiency and reducing manual intervention.
- Enhanced system scalability, performance, and reliability by implementing distributed microservice architectures, asynchronous Kafka-based messaging, Redis caching, Elasticsearch-driven search optimization, and AWS-based deployments and monitoring solutions.

Software Engineer(Capgemini)

Apr '24 - Mar '26

- Backend engineer working on **financial data and accounting systems**, building platforms that process trade and cashflow events and generate accounting records for finance and reporting teams.
- Designed and developed **Spring Boot microservices** using **Java, JPA/Hibernate, and SQL** to ingest, enrich, transform, and persist trade-level data into structured, sub-ledger–ready records.
- **Automated theoretical vs. actual cash reconciliation** by implementing comparison logic, exception handling, and reconciliation report generation, significantly reducing manual effort and improving productivity for finance users.
- Currently developing **hedge-related accounting modules** to process linked financial data, compute valuation changes, and generate fair-value and profit/loss entries; ensured reliability through **JUnit testing (~95% coverage)** and contributed to **CI/CD automation and deployments**.

Associate Software Engineer (Wissen Technology)

Mar '23 - Apr '24

- Backend engineer on **Private Wealth Management platforms**, building services that support **client portfolios, accounts, and investment transactions** used by advisors and operations teams.
- Designed and developed **Spring Boot microservices** using **Java 8, REST APIs, and IBM DB2**, implementing validation, business rules, and persistence for client and transaction data.
- Owned production support and quality by resolving **data consistency and workflow issues**, building **automated and unit tests (90%+ coverage)**, and ensuring reliable service integration and releases.

Consultant(LTI)

Oct '20 - Feb '23

- Developed backend modules using Java, Spring Boot, and SQL for banking applications, contributing to transaction processing, data validation, and system integrations.
- Participated in application development, bug fixing, testing, and production support activities while following Agile practices and coding standards to deliver high-quality software solutions.

EDUCATION

Bachelor of Engineering - Electronics And Communication

Aug '16 - Jun '20

Madhav Institute of Technology and science, Gwalior(6.7 CGPA)

Gwalior, IN

TECHNICAL SKILLS

- Java 8/11, Spring Boot, Spring Security, Spring Data JPA, Hibernate, SQL
- Microservices, RESTful APIs, Distributed Systems, Event-Driven Architecture, Apache Kafka, Design Patterns, System Design
- MySQL, Oracle, IBM DB2, Redis, Elasticsearch, AWS, Cloud Computing
- Docker, Jenkins, CI/CD, Maven, Git, Linux, JUnit, Mockito, Unit Testing, Integration Testing, Agile/Scrum, Data Structures & Algorithms

ACHIEVEMENTS / POSITION OF RESPONSIBILITY

- Received Merit Certificate from government of India for Excellent Acedemic score in 10th Boards Exam .
- Active Member of Coding club in college .
