PROFESSIONAL SUMMARY

Results-driven Java Backend Developer with 4+ years of experience architecting high-performance, cloud-native microservices for banking and financial services. Delivered 20+ Apache Camel-to-Spring Boot migrations on American Express fraud-decisioning systems, engineered an enterprise consent management system for Danske Bank, and reduced API latency by 20% at TCS. Certified AWS Cloud Practitioner. Expert in Java 8/21, Spring Boot 3.x, RESTful API design, microservices architecture, OAuth2/JWT security, Docker/OpenShift/Kubernetes, and CI/CD automation. Consistently drives measurable business impact in Agile/Scrum environments.

TECHNICAL SKILLS

Languages: Java 8+, Java 21, SQL

Frameworks: Spring Boot 3.x, Spring MVC, Spring Data JPA, Spring Security, Hibernate ORM, React 18

Architecture: Microservices, Distributed Systems, RESTful API Design & Development, API Modernization, Apache Camel Migration, Layered Architecture

Cloud & DevOps: AWS (Cloud Practitioner), Azure, OpenShift, Docker, Kubernetes (ConfigMaps & Secrets), GitHub Actions, Jenkins, CI/CD Pipelines, Maven, SonarQube

Security: Spring Security, OAuth2, JWT, RBAC, Token-Based Authentication

Databases: MySQL, PostgreSQL, MSSQL, Azure SQL, Connection Pooling, Query Optimization

Testing: JUnit 5, Mockito, Integration Testing, Regression Testing (85%+ code coverage)

Practices & Tools: Agile/Scrum, Git, Centralized Logging, Exception Handling, Health Checks, Performance Monitoring

WORK EXPERIENCE

Infosys — Associate Consultant
Oct 2024 – Present · Pune, MH

Project: American Express — Fraud Decision Microservices Migration

- Migrated 20+ Apache Camel XML integration flows into independently deployable Spring Boot microservices, improving scalability and cutting deployment risk by eliminating monolithic release dependencies.
- Refactored legacy services into maintainable Java 21 components using layered architecture (Controller → Service → Repository), reducing code complexity by ~35% and accelerating onboarding for new team members.
- Implemented critical fraud-decision logic and business validations, achieving 100% functional parity with the legacy system, validated through comprehensive regression testing.
- Resolved 10+ recurring production issues by enhancing centralized logging, exception handling, and performance monitoring, resulting in measurable improvement in system uptime and stability.
- Built JUnit 5 and Mockito test suites delivering 85%+ code coverage, reducing post-release defects and supporting confident continuous deployment.

Project: Danske Bank — Consent Collection Application

- Designed and built a Consent Management System handling customer data-sharing consents at enterprise scale using Java 8, Spring Boot 3.x, and Spring Data JPA.
- Engineered full consent lifecycle management (creation, versioning, publishing, and immutable audit tracking), ensuring full regulatory compliance and passing third-party security audits.
- Implemented secure RESTful APIs with JWT authentication and fine-grained RBAC, hardening the system against unauthorised access across all consent operations.
- Containerized applications using Docker and deployed to OpenShift; managed environment-specific configuration via Kubernetes ConfigMaps and Secrets.
- Built end-to-end GitHub Actions CI/CD pipelines automating build → unit test → SonarQube scan → Docker image build → OpenShift deployment, reducing release cycle time.
- Implemented centralized logging, health-check endpoints, and operational monitoring dashboards enabling proactive incident detection and faster mean-time-to-resolution.

TCS (Tata Consultancy Services) — Java Cloud Developer
Oct 2023 – Oct 2024 · Pune, MH

- Designed and delivered backend microservices and REST APIs for enterprise-grade workloads, adhering to industry-standard API design principles and serving thousands of daily active transactions.
- Secured API endpoints using Spring Security, OAuth2, and JWT; enforced RBAC policies across multiple service boundaries, reducing unauthorised-access incidents to zero.

- Deployed and maintained applications on Azure Web Apps; integrated Azure SQL databases with optimised connection pooling and query tuning, improving average API response time by 20%.
- Led integrations with external enterprise systems, streamlining inter-service data flows and eliminating bottlenecks that previously caused SLA breaches.

Capgemini — Java Developer *Jun 2021 – Jul 2023 · Pune, MH*

- Built scalable backend applications using Spring Boot, Hibernate ORM, AWS cloud services, and SQL databases supporting enterprise document-management workflows for a Fortune 500 client.
- Redesigned document-management pipelines, cutting manual processing effort by 40% and improving throughput, directly contributing to a reduction in operational overhead.
- Delivered features in 2-week Agile sprints; set up Jenkins CI/CD pipelines and integrated automated testing, enabling faster and more reliable releases.

KEY PROJECTS

Edudex – Student Management System | Full-Stack Product (Live) *2026 – Present · edudex.in*

- Architected a full-stack attendance platform with a Java 21 / Spring Boot 3.2 backend and React 18 / TypeScript frontend, currently live and serving real users at www.edudex.in.
- Built multi-role dashboards (Admin, Teacher, Student) with real-time attendance tracking, cascading drop-downs, and automated reporting, reducing manual attendance workload for educators.
- Designed JWT-secured REST APIs with RBAC; integrated TanStack Query, Zod schema validation, React Hook Form, shadcn/ui, Recharts, and Framer Motion for a production-grade UX.
- Independently planned, built, and deployed the full product, proving end-to-end ownership from architecture to production (Vercel deployment).

EDUCATION

Bachelor of Engineering – Electronics Engineering *2017 – 2021*
Ramdeobaba College of Engineering and Management, Nagpur

CERTIFICATIONS

- AWS Cloud Practitioner — Amazon Web Services (2023)
- Java with Spring Boot — Coursera (2022)
- AWS DevOps — Udemy (2023)
